Fridge | Prompt, continuations and human judgments

You and your friend Sam go for a long walk together. After the walk, you go back to Sam's house. You say to Sam, 'I'm thirsty.' Sam opens the fridge and responds, 'Sure, I have

Leading scored continuations

1. some	55.23%	6. juice	1.01%
2. a	23.02%	7. orange	0.89%
3. water	5.47%	8. water in	0.80%
4. plenty	1.78%	9. two	0.79%
5. an	1.01%	10. lots	0.79%

Percent = sampling mass over 121,301 scored strings,
including overlapping one- and two-word continuations.

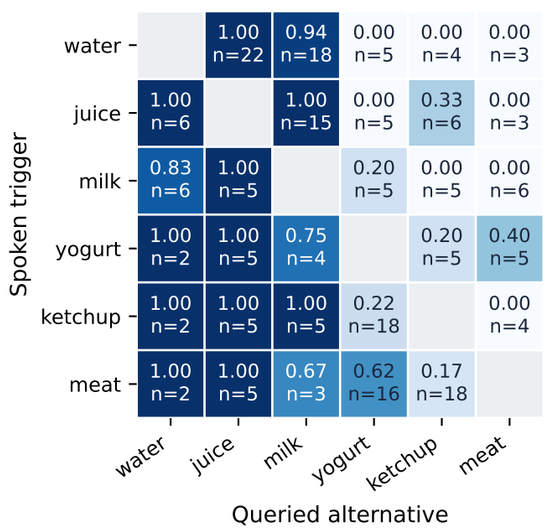

Six tested alternatives

Word	Human rank	Qwen rank	Raw P	Set P
water	1	1	0.0558	1.000
juice	2	2	0.0103	0.762
milk	3	3	0.00217	0.260
yogurt	4	4	1.87e-05	0.006
ketchup	5	5	4.07e-06	0.002
meat	6	6	1.18e-06	0.000

Ranks refer to the six tested words; 1 = highest.
Human ranks are the experiment's reference relevance ranks.

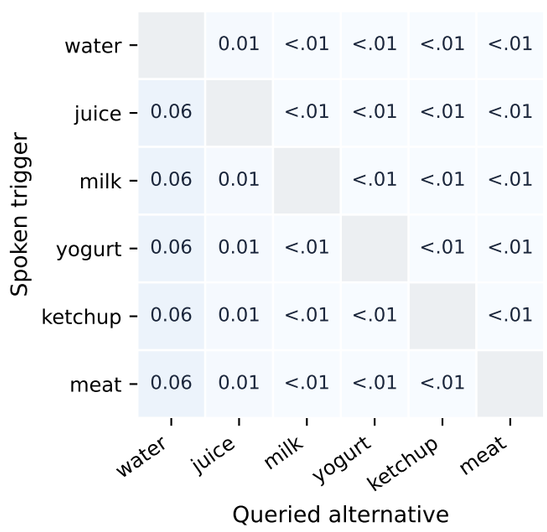

Human judgments

Rate and response count

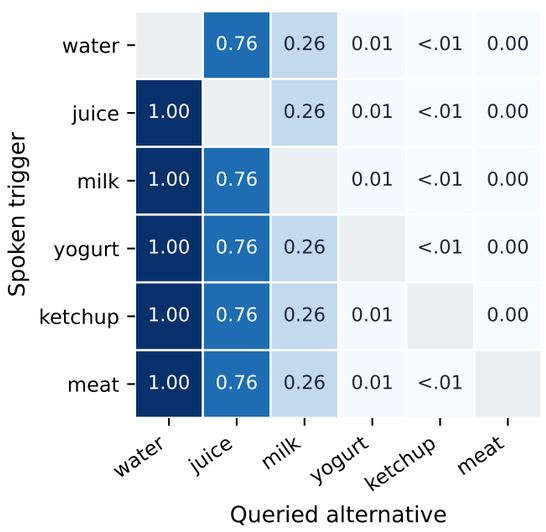

No linking

r = 0.557 ρ = 0.860 log = -2.971

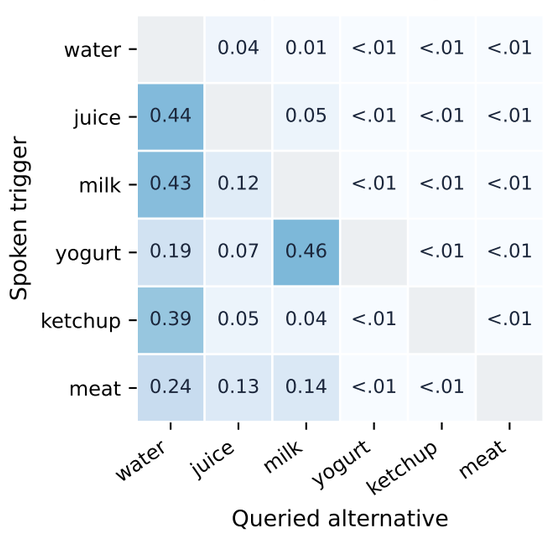

Set Top-K

r = 0.827 ρ = 0.860 log = -1.007

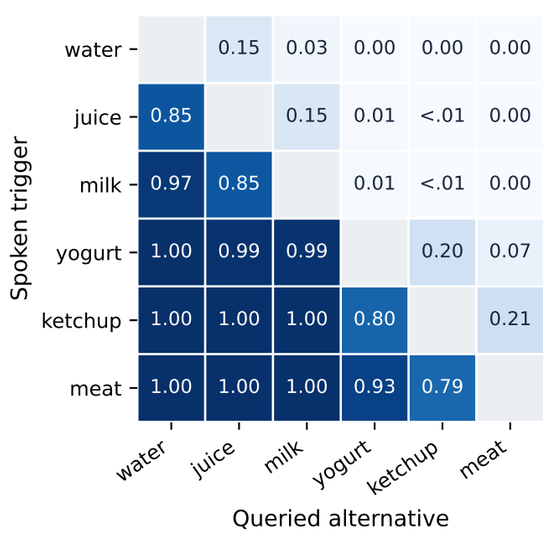

X but not Y

r = 0.559 ρ = 0.816 log = -1.701

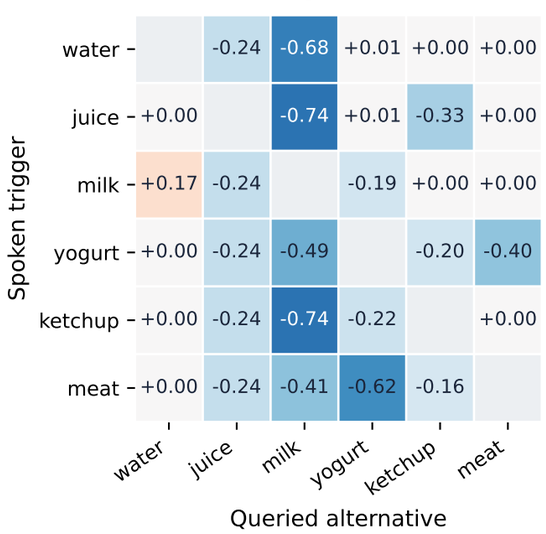

Ordering

r = 0.694 ρ = 0.769 log = -0.840

Set minus human

Red = too high; blue = too low

All 30 distinct trigger–query pairs are shown. Model scores weight pairs equally; human response counts vary.
No linking uses raw continuation probability. Set uses saved Top-K inclusion probability (K=20). Predictions and ranks are distinct from human responses.
Corrected Qwen2-7B run; descriptive point estimates. Small nonzero probabilities display as <.01; gray diagonal pairs were not tested.
