Cut

You and your friend Blair come back from a long day shopping. You want to try on your new sweater, and you tell Blair, 'I want to remove this tag.' Blair looks through some drawers and responds, 'Sure, I have my...

Set Top-K (K = 20)

Exclusion probabilities: six experimental words

Rank	Word	Probability
1	**scissors**	1.000
2	**nail clippers**	0.124
3	**stapler**	0.048
4	**keys**	0.014
5	**batteries**	0.002
6	**thumb tacks**	0.000

Human exclusion

Mean across five spoken alternatives

Rank	Word	Mean rate
1	**scissors**	0.920
2	**nail clippers**	0.701
3	**thumb tacks**	0.273
4	**stapler**	0.262
5	**keys**	0.232
6	**batteries**	0.050

Bold words were tested in the experiment. No linking shows the top 5 continuations and up to 4 intervening words per experimental-word gap.
No linking positions refer to the full vocabulary; ... marks omissions. Set and human columns are independently ranked among the 6 experimental words; = marks ties.
Human rates average the five trigger-specific exclusion rates with equal weights. They summarize across spoken alternatives; the individual rates may differ.
Saved corrected Qwen2-7B results; Set uses 500 samples. Zero means 0/500 inclusions. No new sampling.
