Restaurant

You and your friend Billie go to a new restaurant. While you're there, you find out that it's Billie's 21st birthday. You say to Billie, 'Let's order some drinks!'
Billie looks at the menu and responds, 'Sure, they have...

Set Top-K (K = 20)

Exclusion probabilities: six experimental words

Rank	Word	Probability
1	**cocktails**	0.222
2	**vodka**	0.140
3	**soda**	0.072
4	**cake**	0.008
5=	**salad**	0.000
5=	**soup**	0.000

Human exclusion

Mean across five spoken alternatives

Rank	Word	Mean rate
1	**cocktails**	0.950
2	**vodka**	0.900
3	**soda**	0.594
4	**cake**	0.297
5	**salad**	0.220
6	**soup**	0.218

Bold words were tested in the experiment. No linking shows the top 5 continuations and up to 4 intervening words per experimental-word gap.
No linking positions refer to the full vocabulary; ... marks omissions. Set and human columns are independently ranked among the 6 experimental words; = marks ties.
Human rates average the five trigger-specific exclusion rates with equal weights. They summarize across spoken alternatives; the individual rates may differ.
Saved corrected Qwen2-7B results; Set uses 500 samples. Zero means 0/500 inclusions. No new sampling.
