Science

You and your friend Drew are looking for books in a library. You say, 'I want to learn more about science.' Drew looks at the library catalogue and responds, 'Sure, they have books about...

Set Top-K (K = 20)

Exclusion probabilities: six experimental words

Rank	Word	Probability
1	**physics**	1.000
2	**geology**	0.352
3	**math**	0.210
4	**zoology**	0.076
5	**philosophy**	0.014
6	**art**	0.002

Human exclusion

Mean across five spoken alternatives

Rank	Word	Mean rate
1	**physics**	0.900
2	**geology**	0.831
3	**zoology**	0.817
4	**art**	0.633
5	**math**	0.591
6	**philosophy**	0.536

Bold words were tested in the experiment. No linking shows the top 5 continuations and up to 4 intervening words per experimental-word gap.
No linking positions refer to the full vocabulary; ... marks omissions. Set and human columns are independently ranked among the 6 experimental words; = marks ties.
Human rates average the five trigger-specific exclusion rates with equal weights. They summarize across spoken alternatives; the individual rates may differ.
Saved corrected Qwen2-7B results; Set uses 500 samples. Zero means 0/500 inclusions. No new sampling.
