BAG · frozen predictions and pair-level score differences

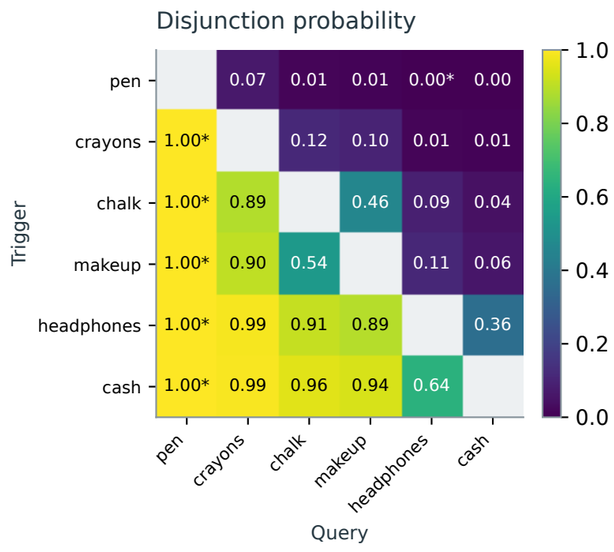

Highest summed score of four: Disjunction | Set -46.73 Ordering -25.51 Conjunction -52.15 Disjunction -20.21

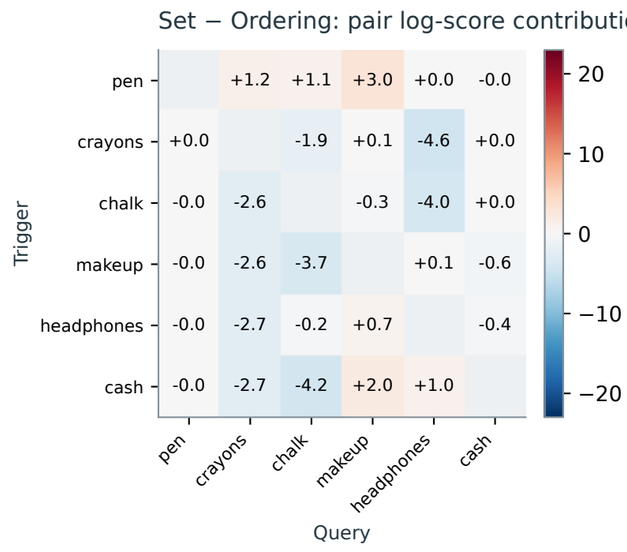

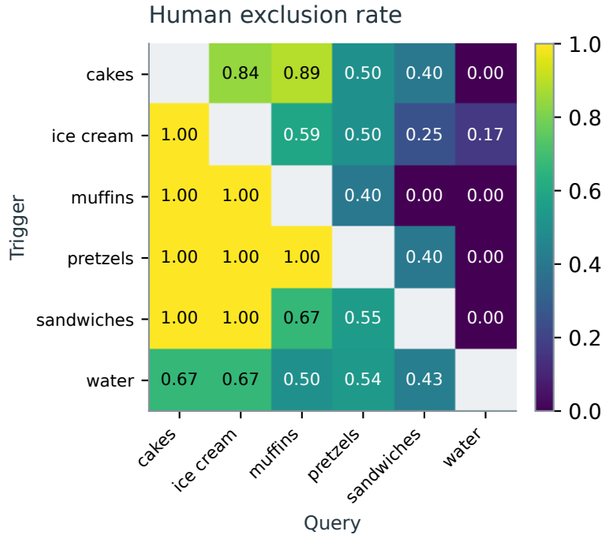

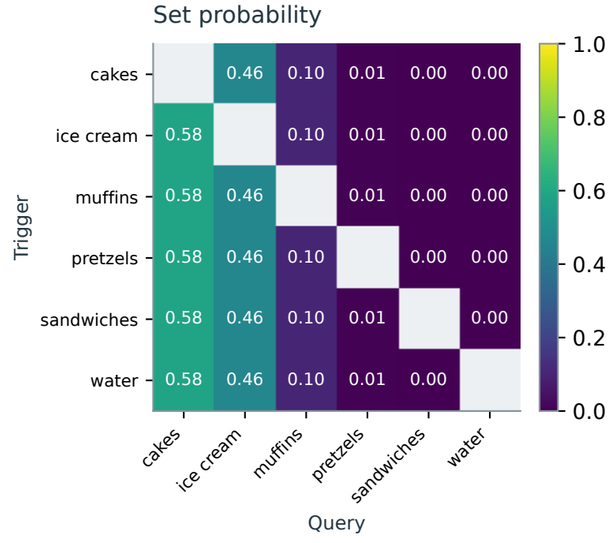

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

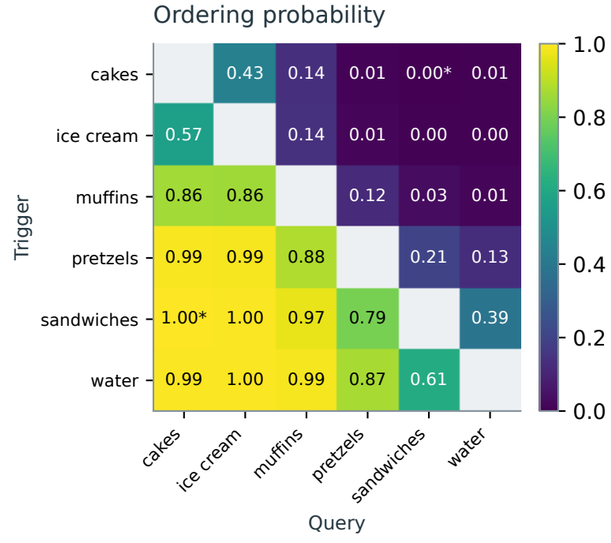

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

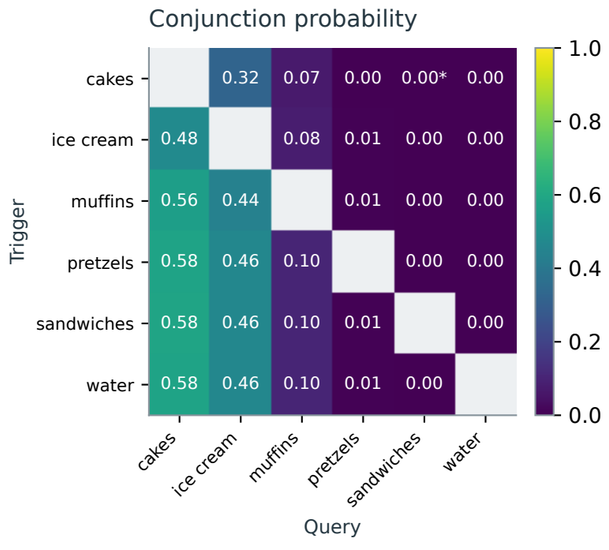

BAKERY · frozen predictions and pair-level score differences

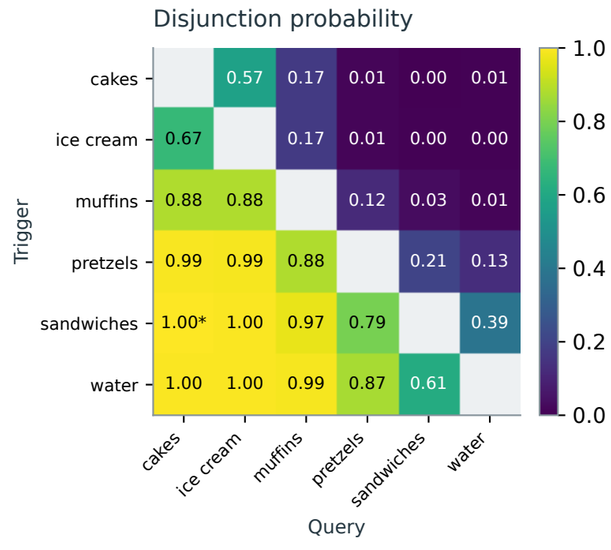

Highest summed score of four: Disjunction | Set -37.95 Ordering -32.59 Conjunction -46.23 Disjunction -25.17

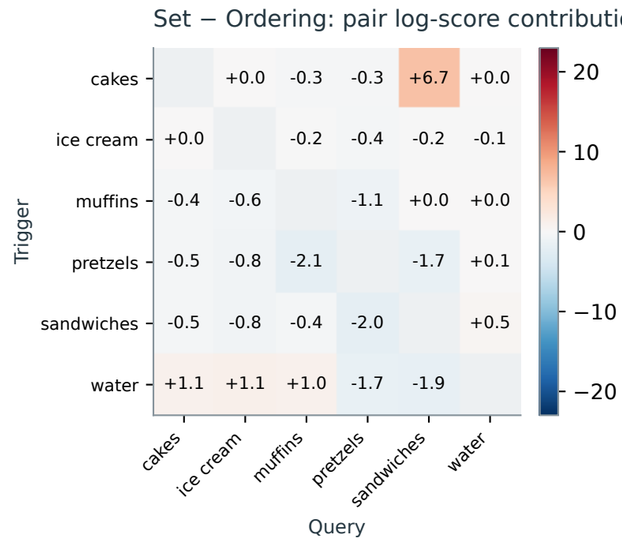

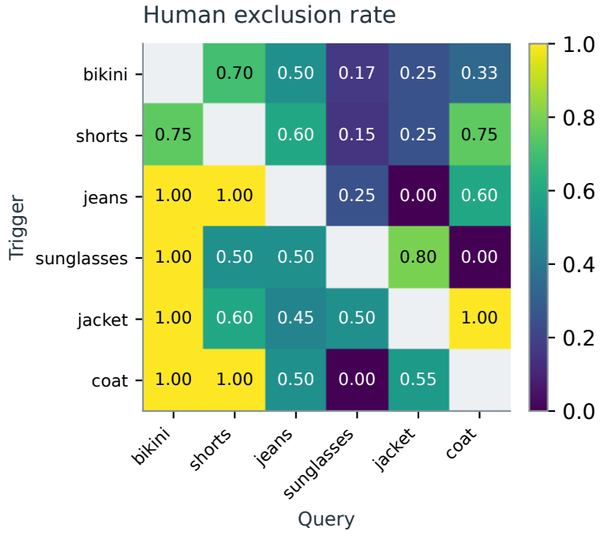

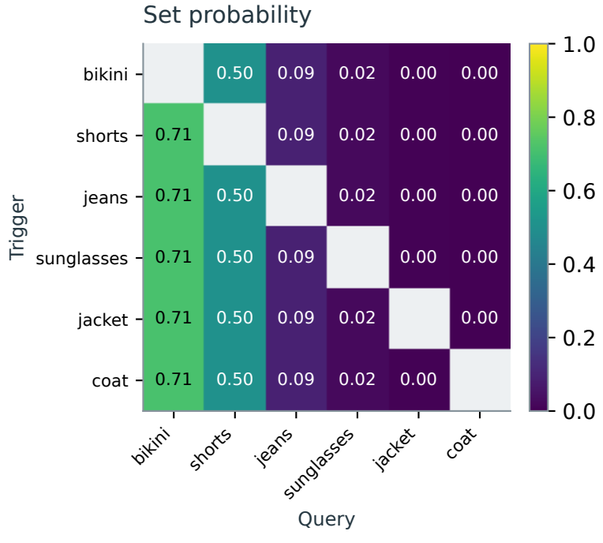

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

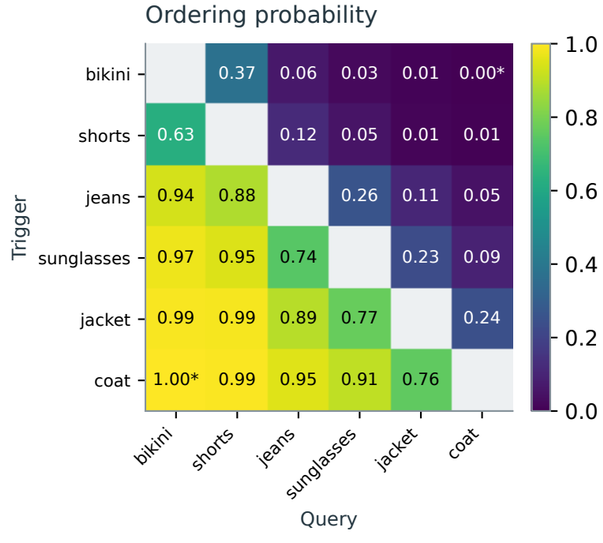

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

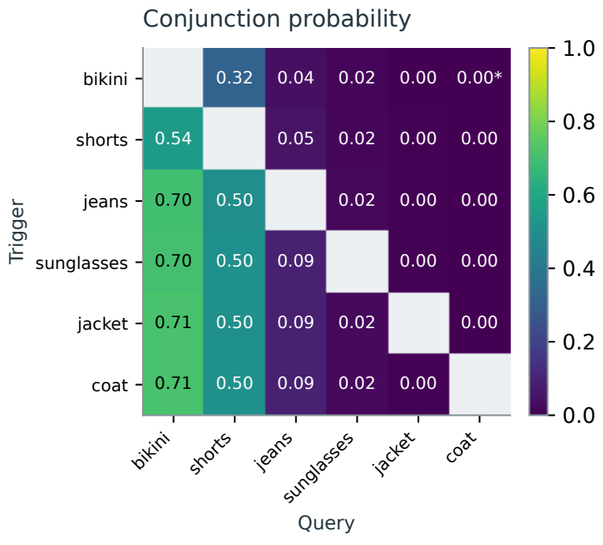

BEACH · frozen predictions and pair-level score differences

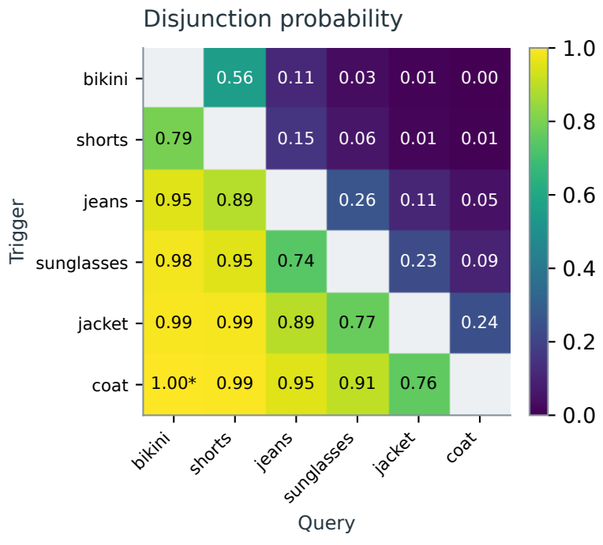

Highest summed score of four: Disjunction | Set -42.70 Ordering -35.42 Conjunction -49.58 Disjunction -29.19

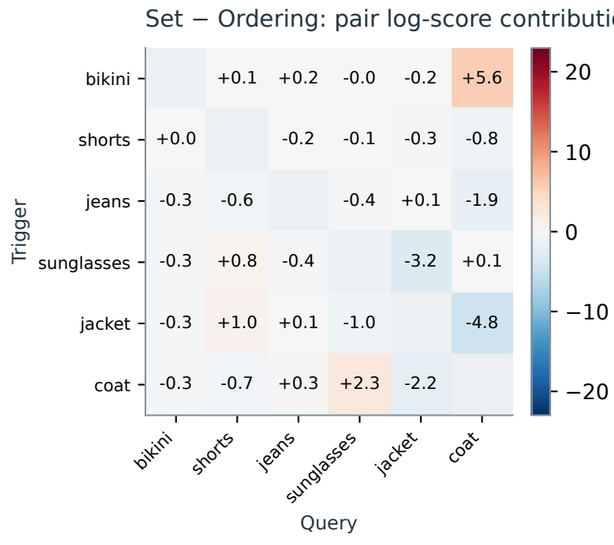

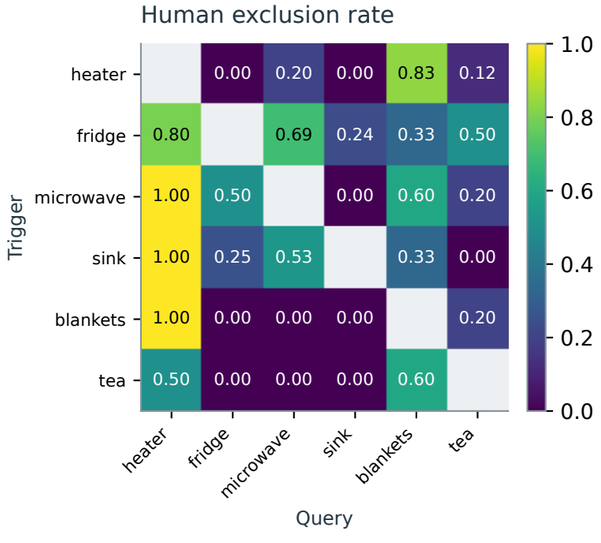

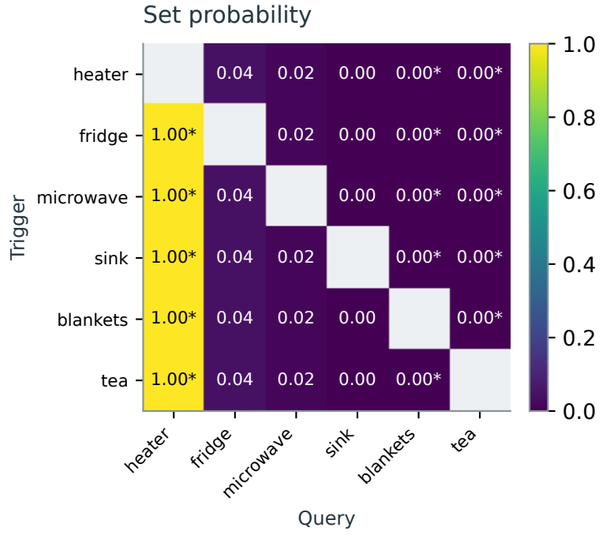

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

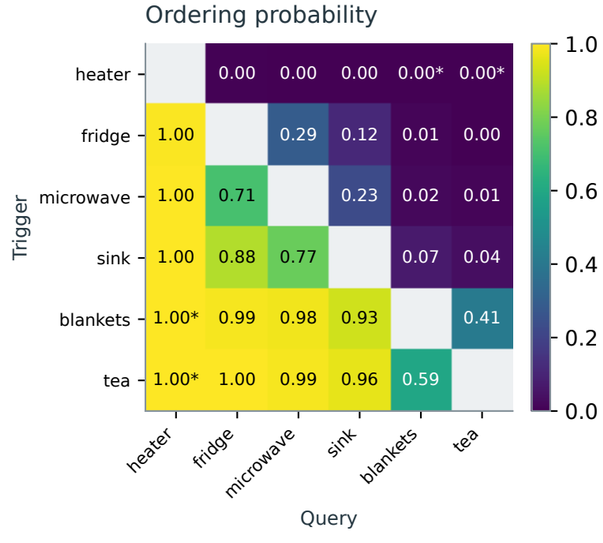

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

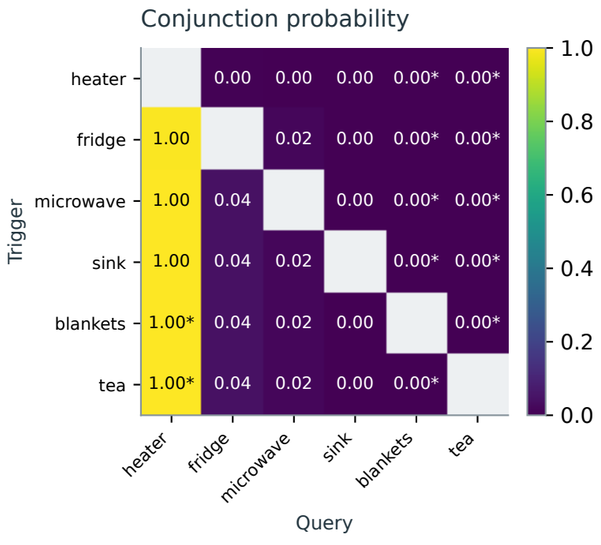

COLD · frozen predictions and pair-level score differences

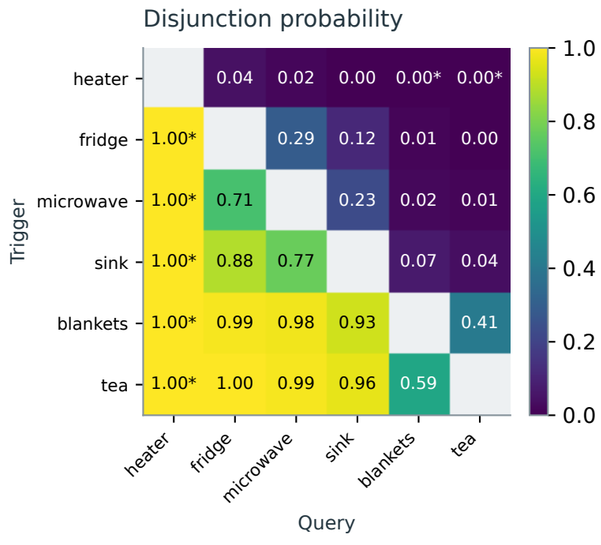

Highest summed score of four: Ordering | Set -111.85 Ordering -75.65 Conjunction -108.72 Disjunction -78.78

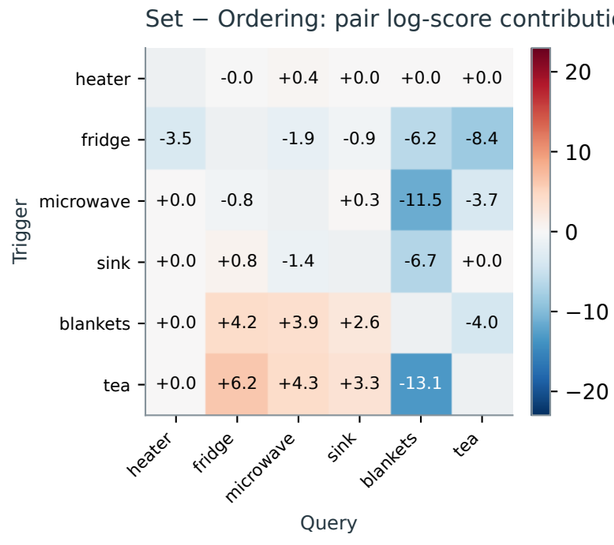

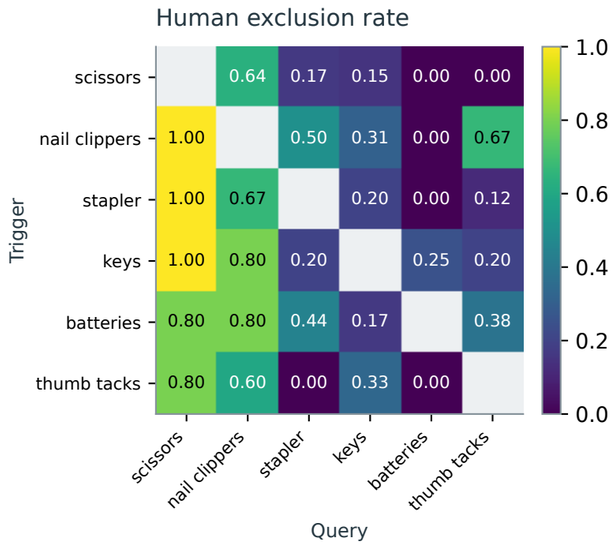

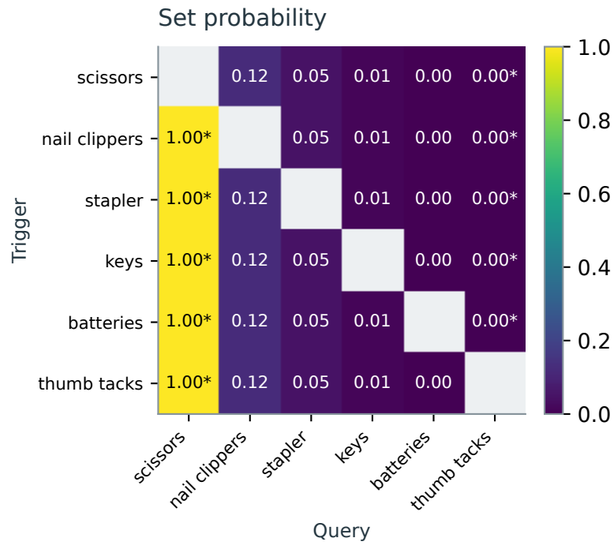

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

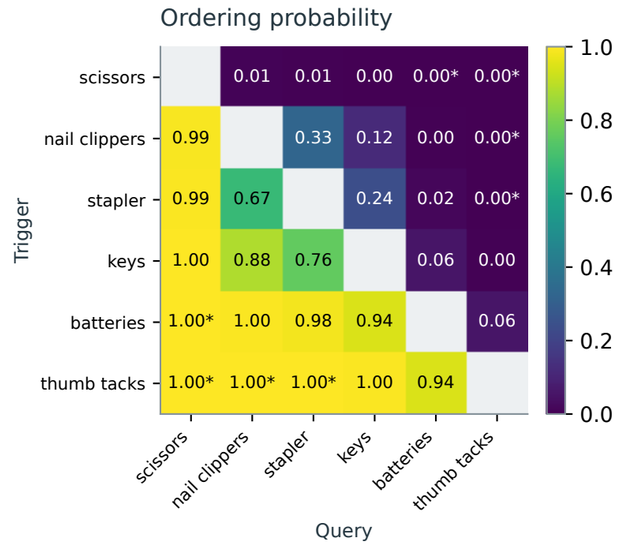

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

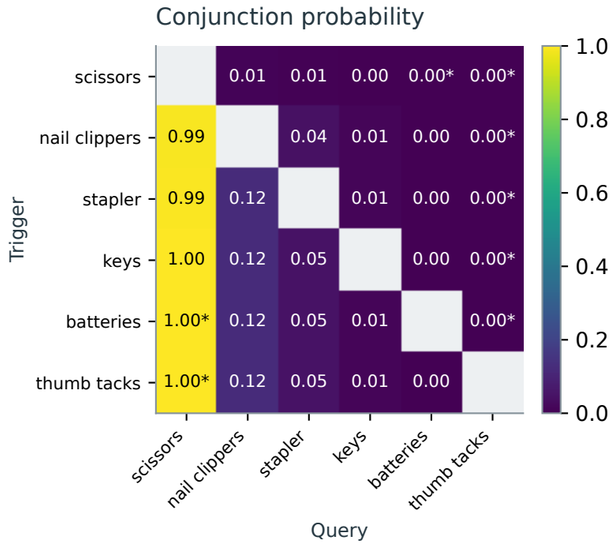

CUT · frozen predictions and pair-level score differences

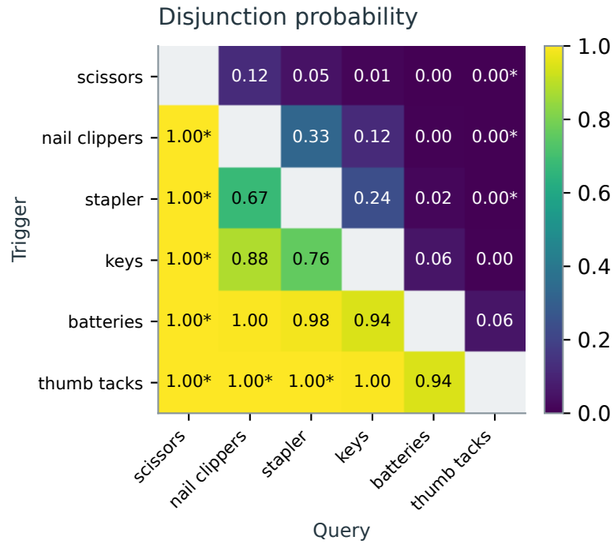

Highest summed score of four: Set | Set -58.90 Ordering -83.99 Conjunction -61.13 Disjunction -81.83

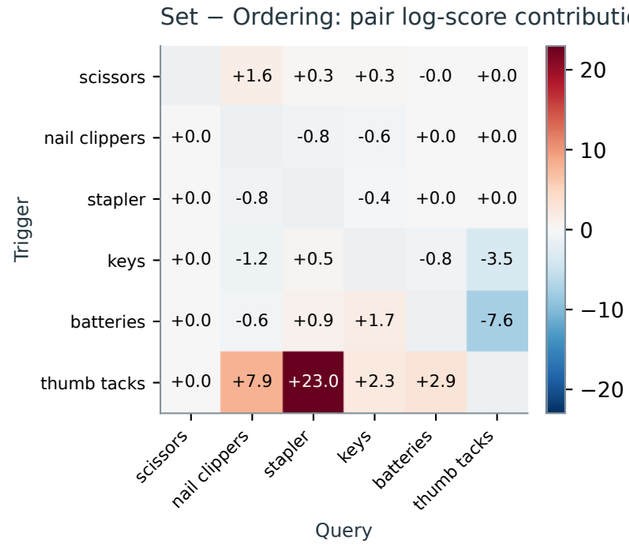

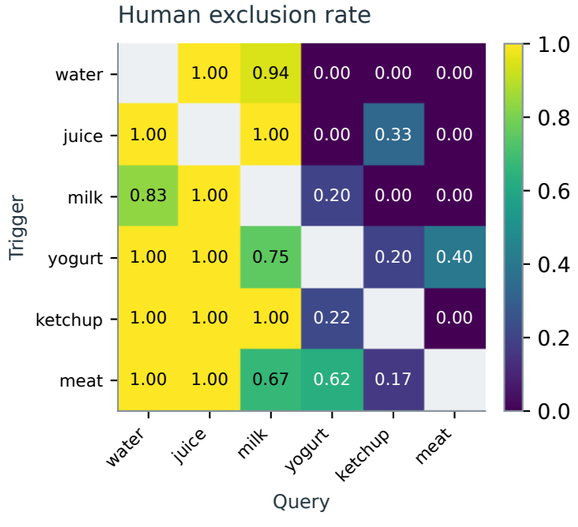

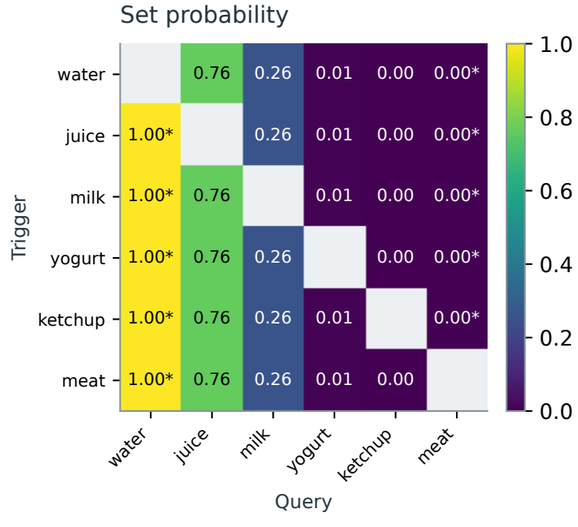

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

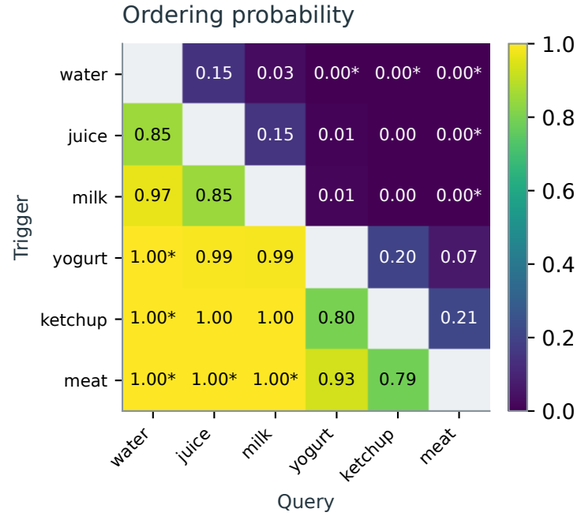

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

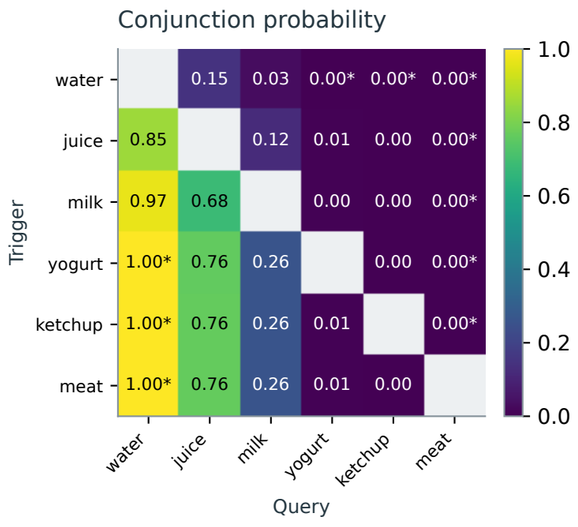

FRIDGE · frozen predictions and pair-level score differences

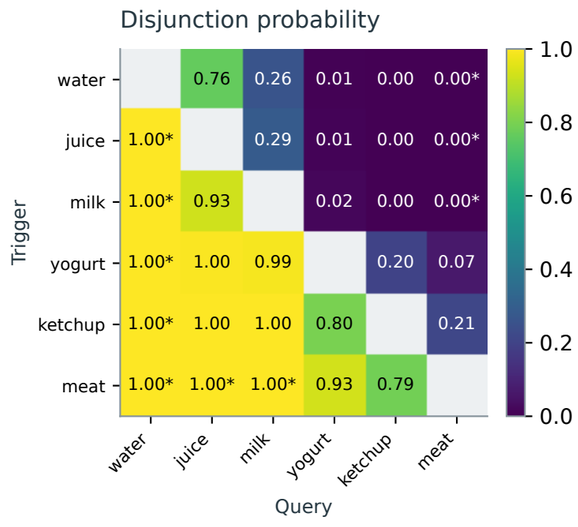

Highest summed score of four: Disjunction | Set -30.21 Ordering -25.20 Conjunction -31.67 Disjunction -23.92

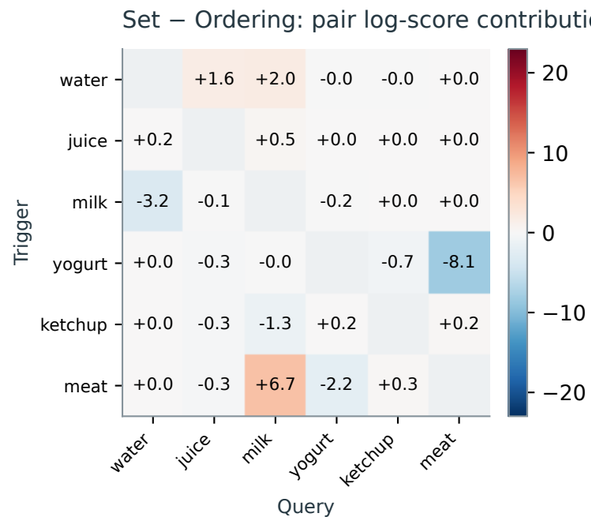

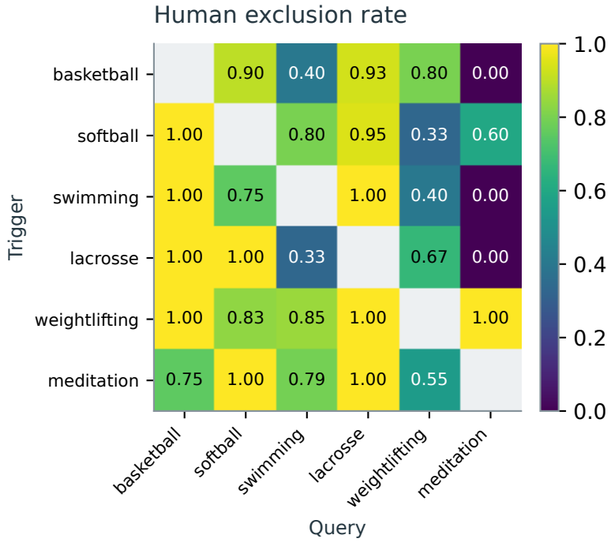

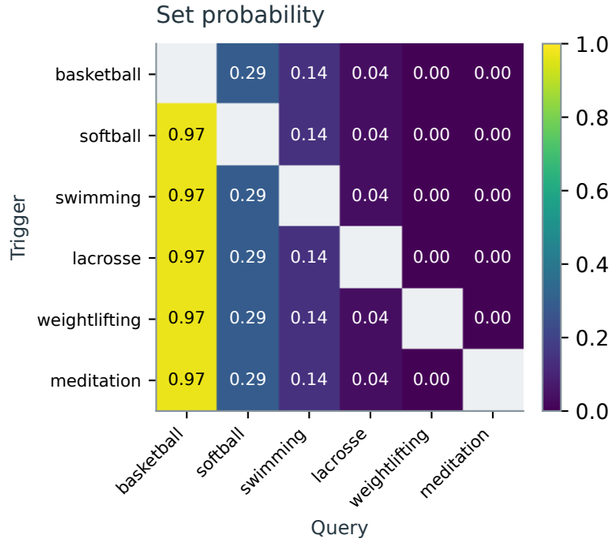

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

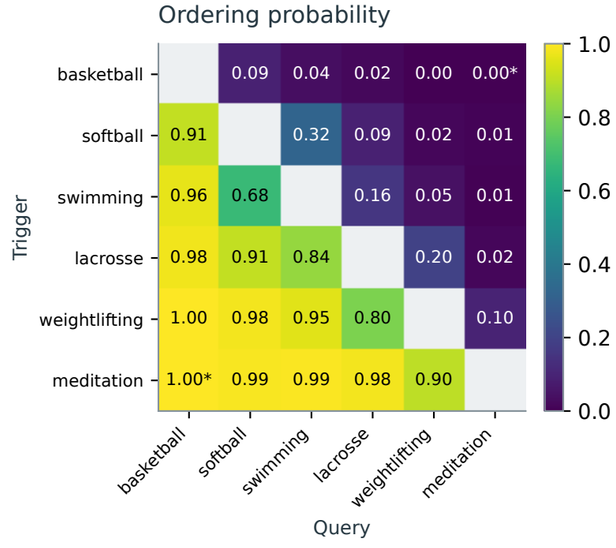

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

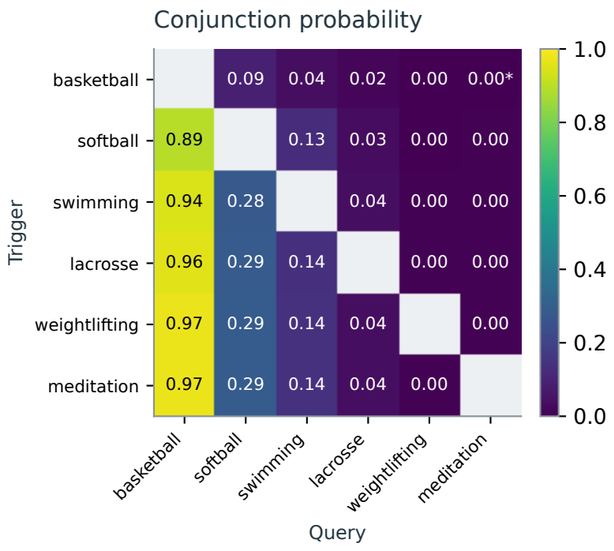

GYM · frozen predictions and pair-level score differences

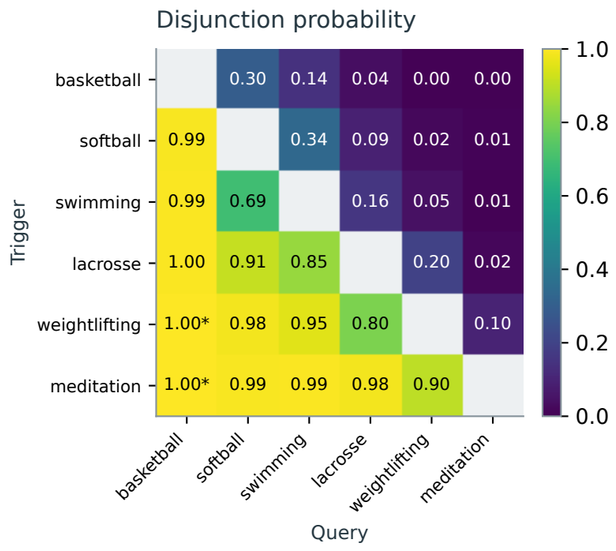

Highest summed score of four: Disjunction | Set -53.43 Ordering -37.72 Conjunction -56.75 Disjunction -34.85

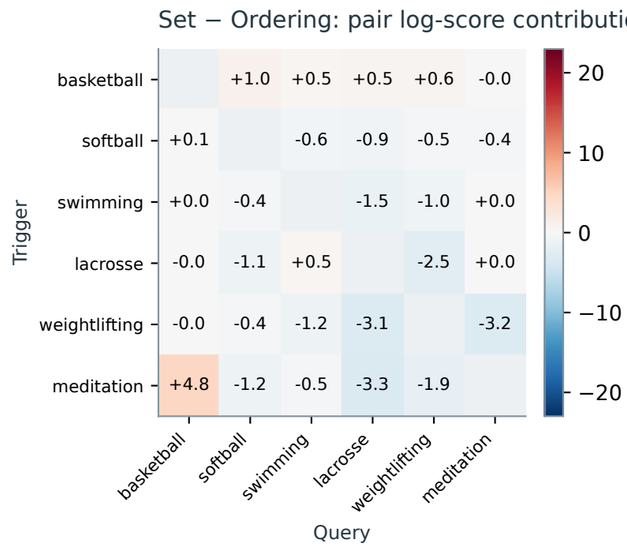

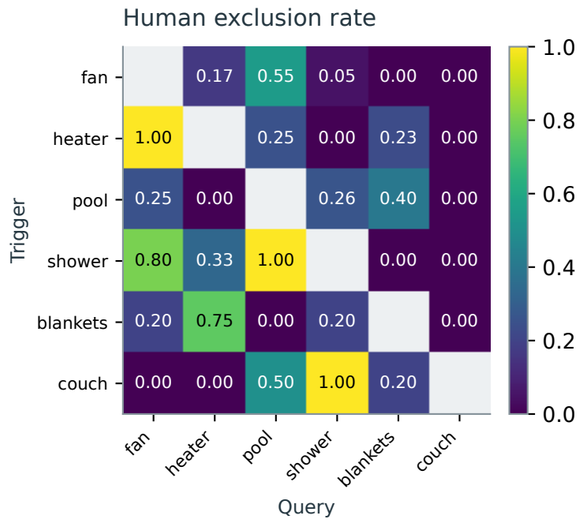

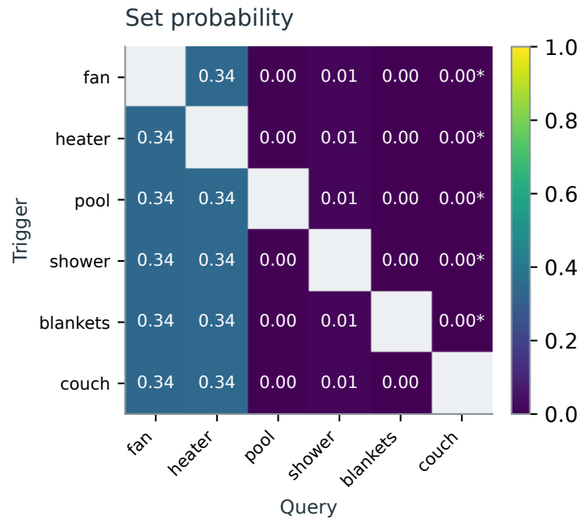

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

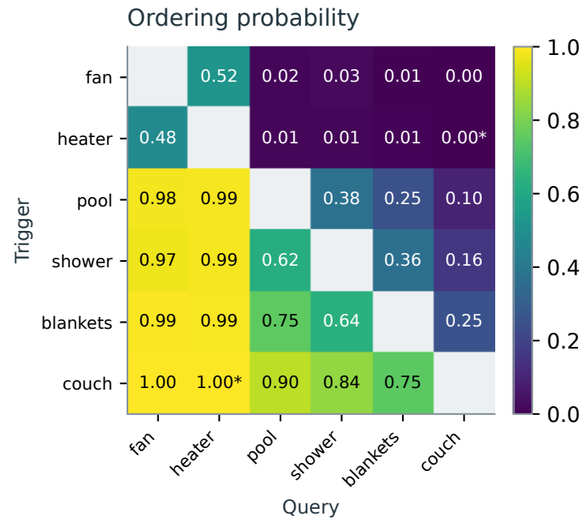

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

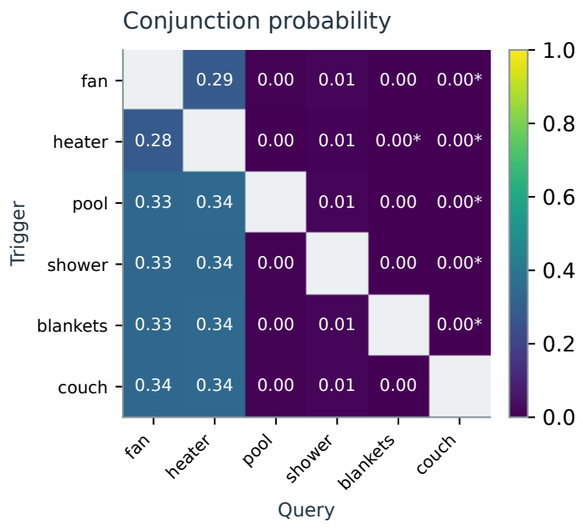

HOT · frozen predictions and pair-level score differences

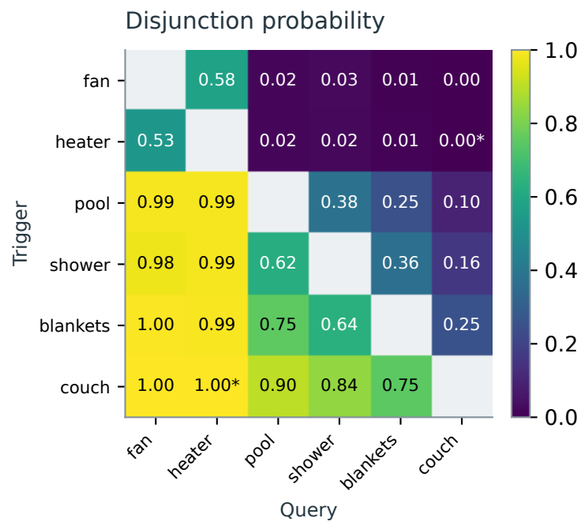

Highest summed score of four: Set | Set -30.88 Ordering -59.37 Conjunction -35.05 Disjunction -59.82

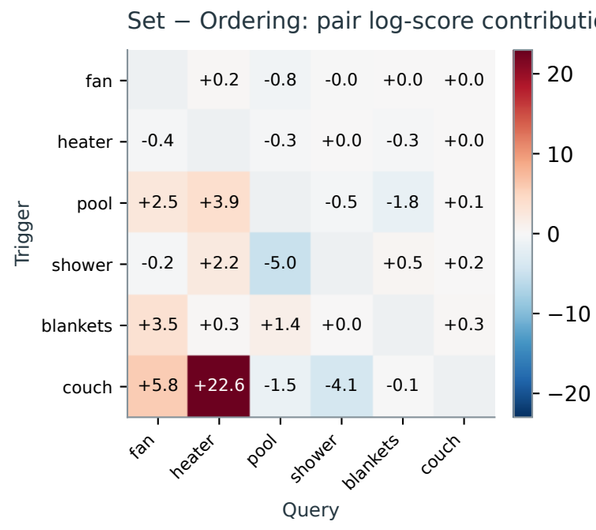

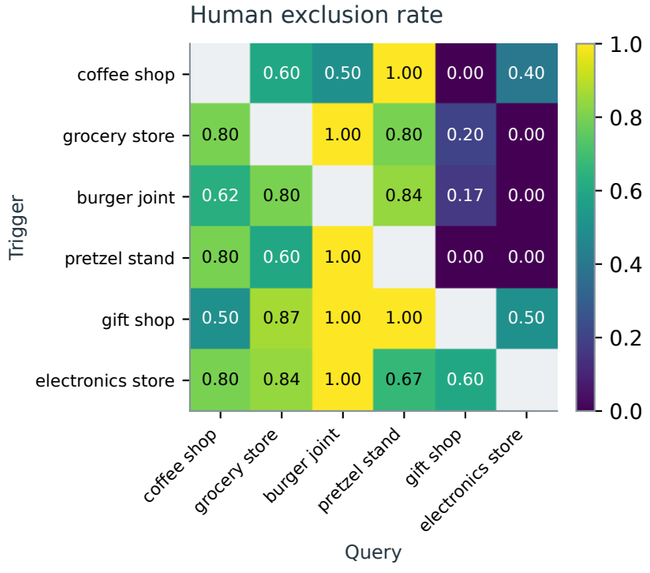

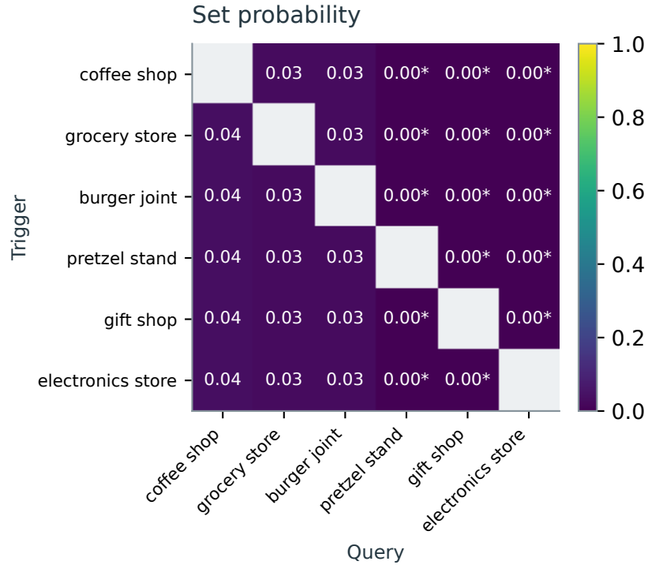

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

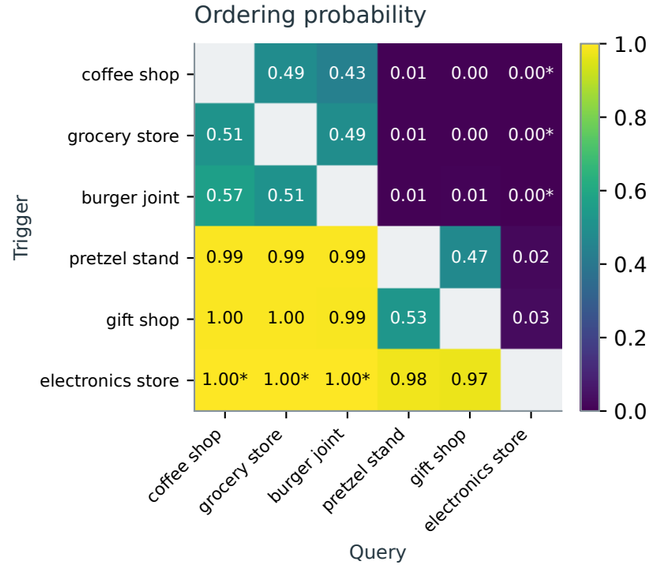

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

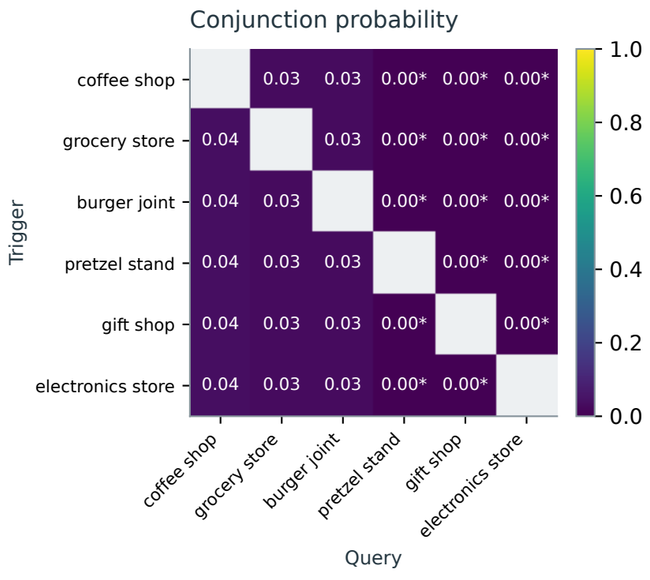

MALL · frozen predictions and pair-level score differences

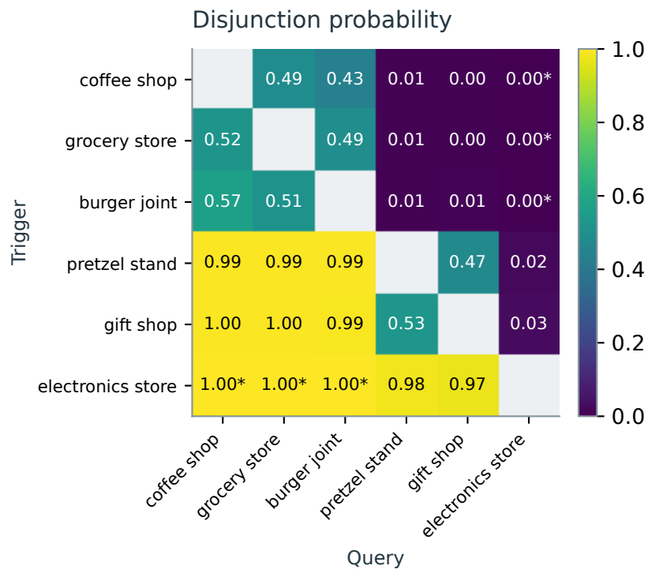

Highest summed score of four: Disjunction | Set -182.93 Ordering -49.47 Conjunction -182.97 Disjunction -49.47

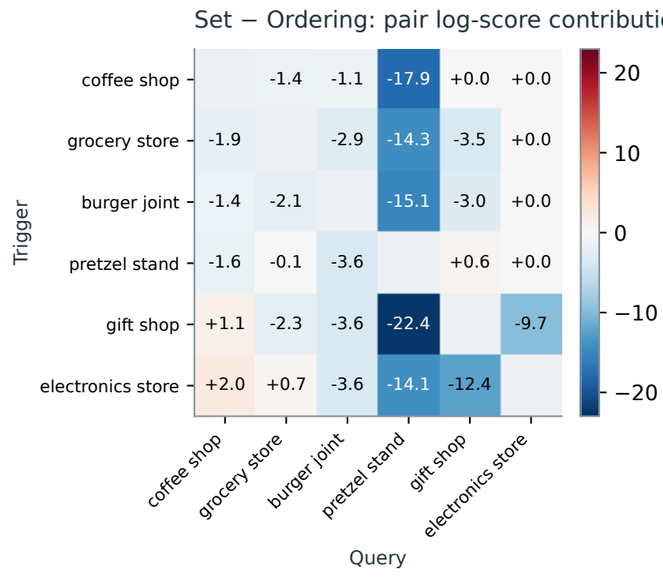

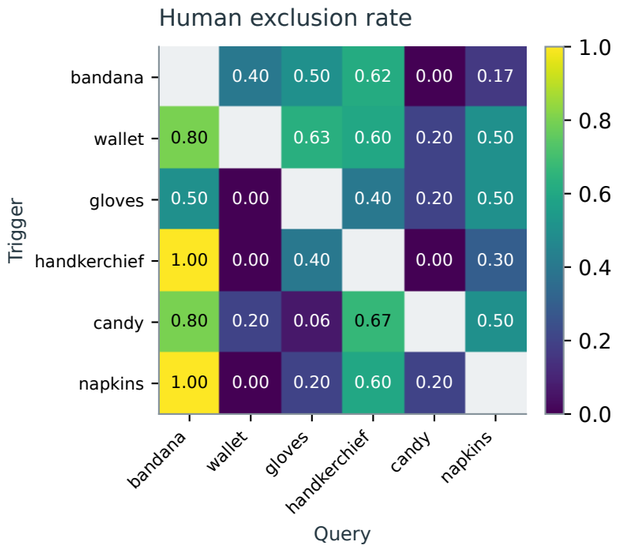

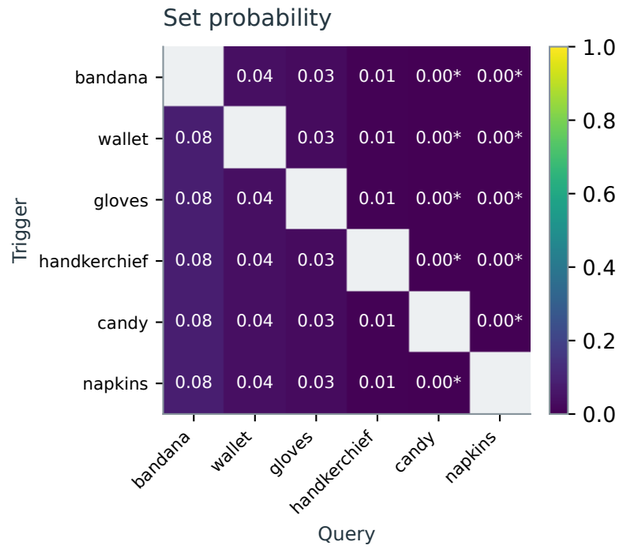

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

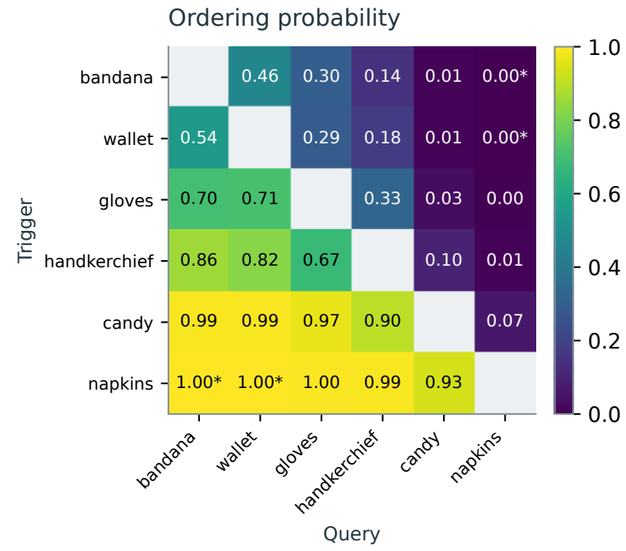

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

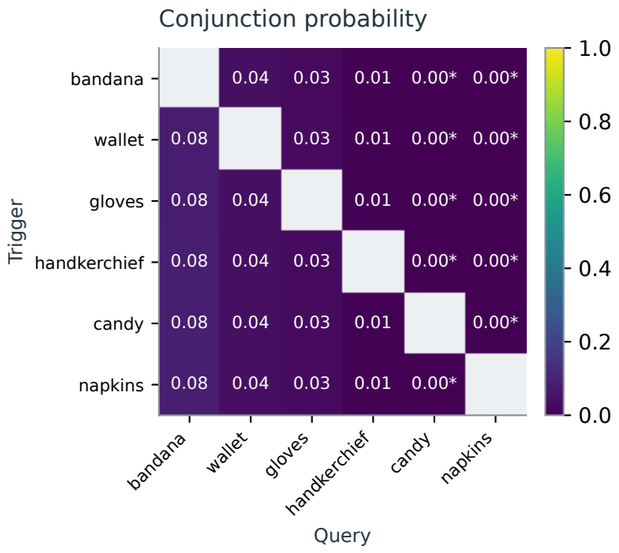

MASK · frozen predictions and pair-level score differences

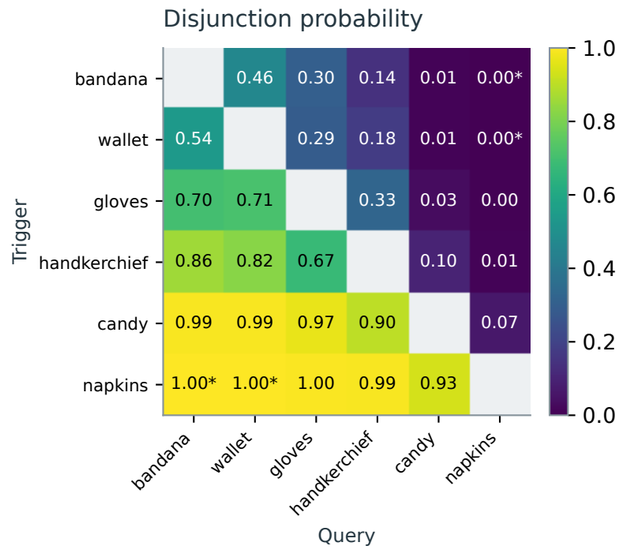

Highest summed score of four: Ordering | Set -92.69 Ordering -73.81 Conjunction -92.77 Disjunction -73.81

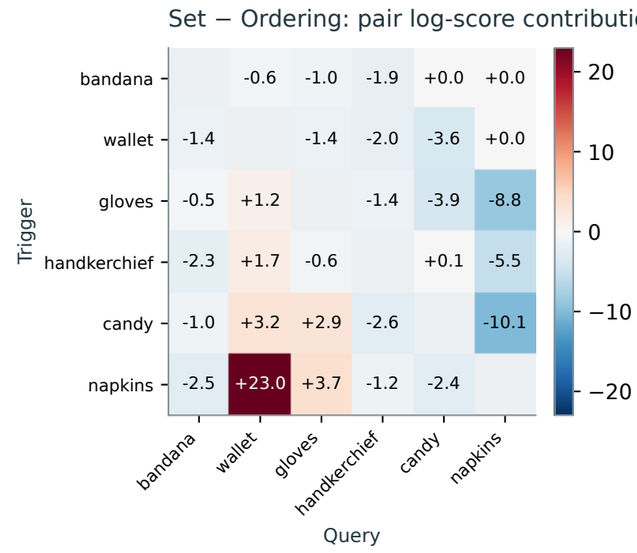

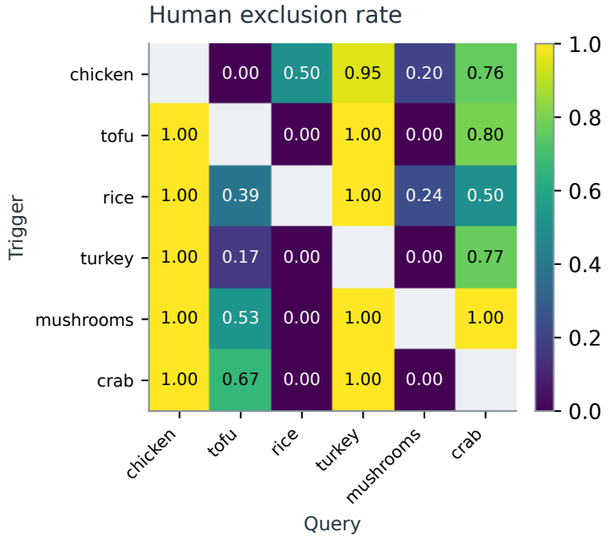

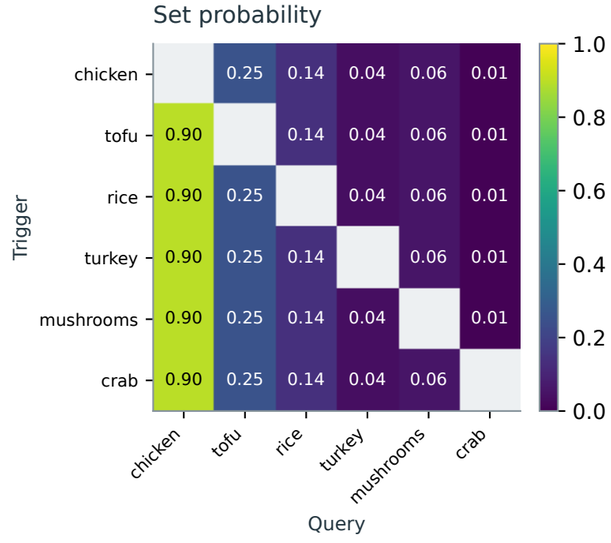

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

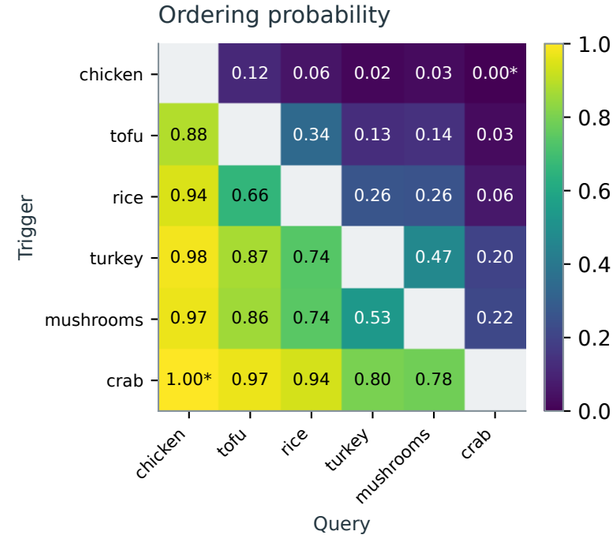

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

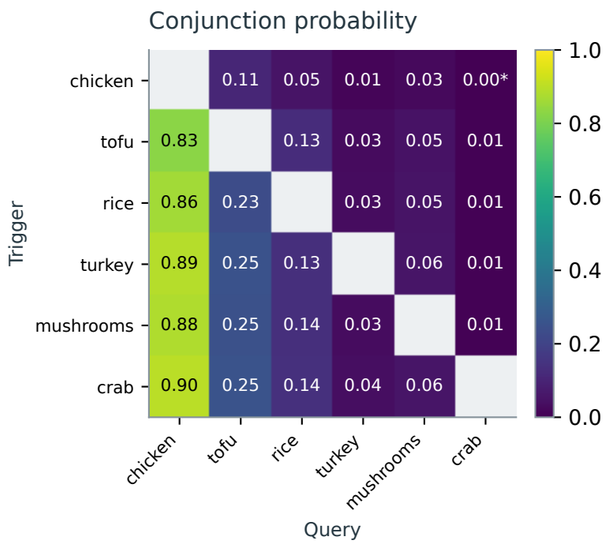

MEAT · frozen predictions and pair-level score differences

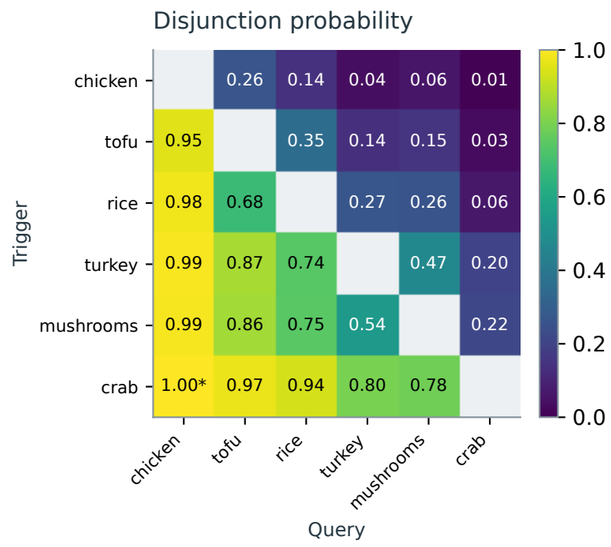

Highest summed score of four: Disjunction | Set -43.15 Ordering -48.87 Conjunction -58.65 Disjunction -33.90

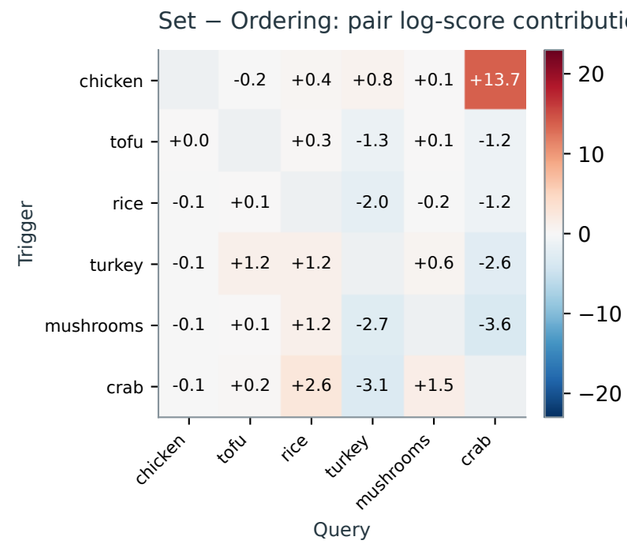

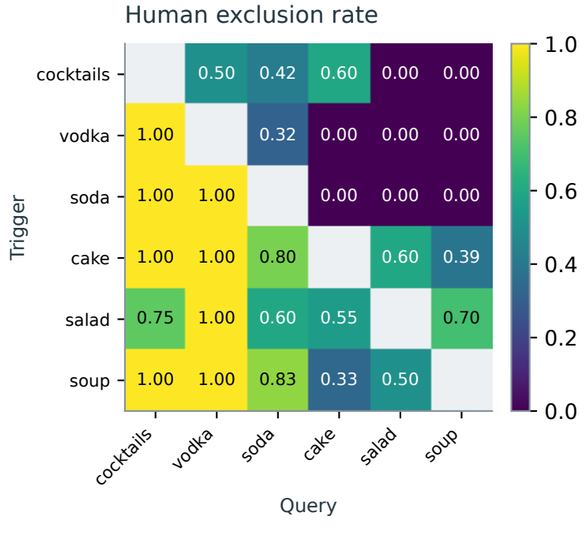

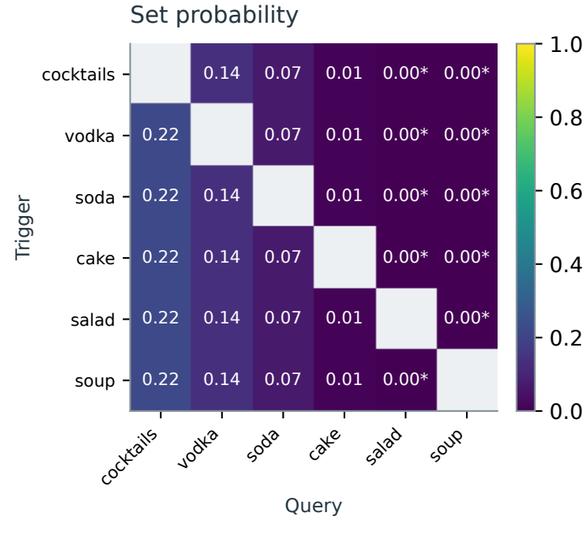

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

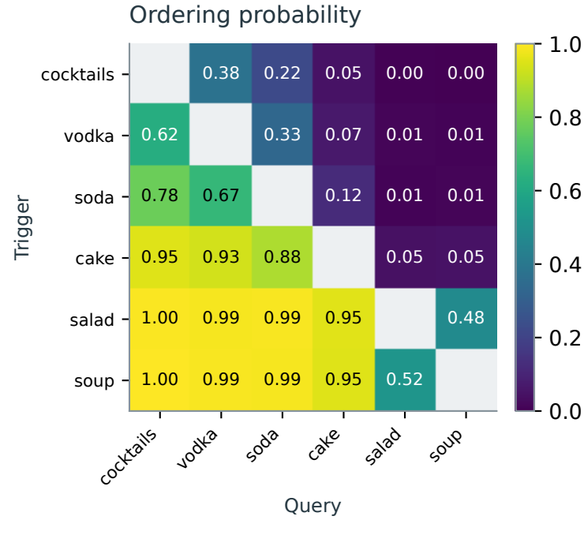

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

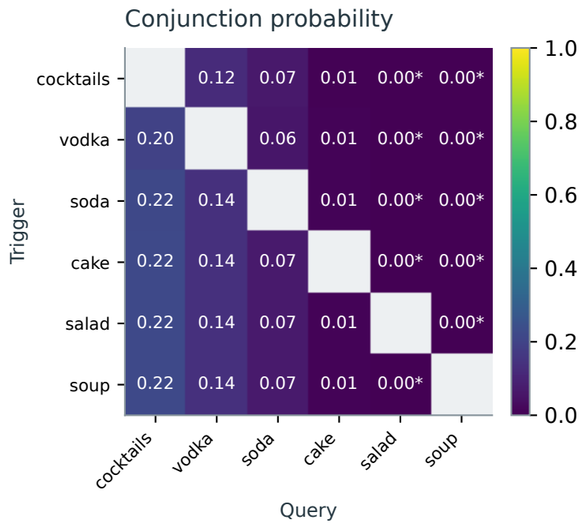

RESTAURANT · frozen predictions and pair-level score differences

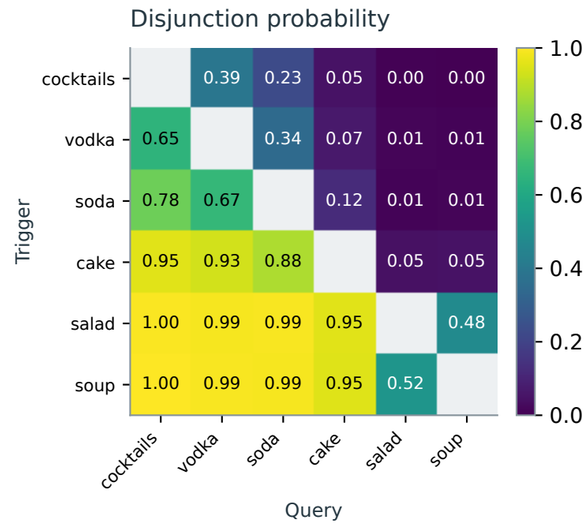

Highest summed score of four: Disjunction | Set -81.69 Ordering -17.97 Conjunction -82.14 Disjunction -17.89

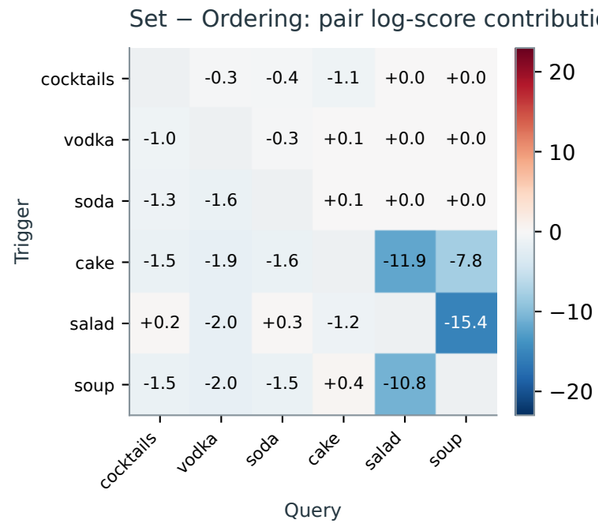

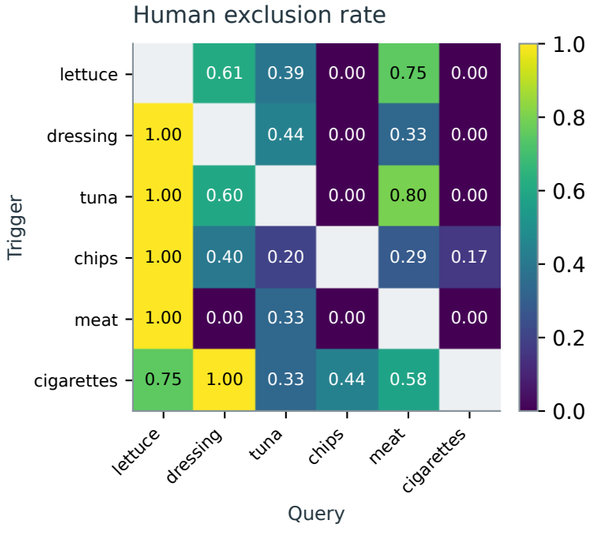

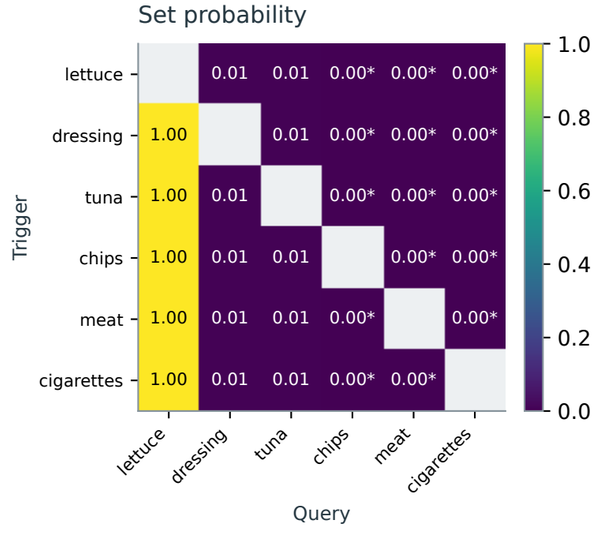

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

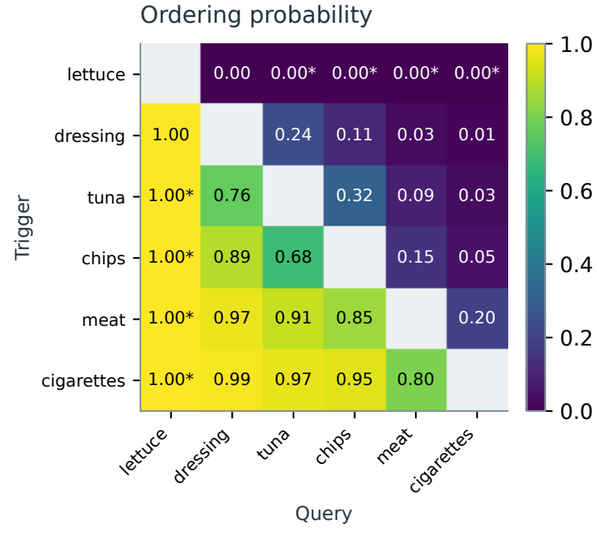

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

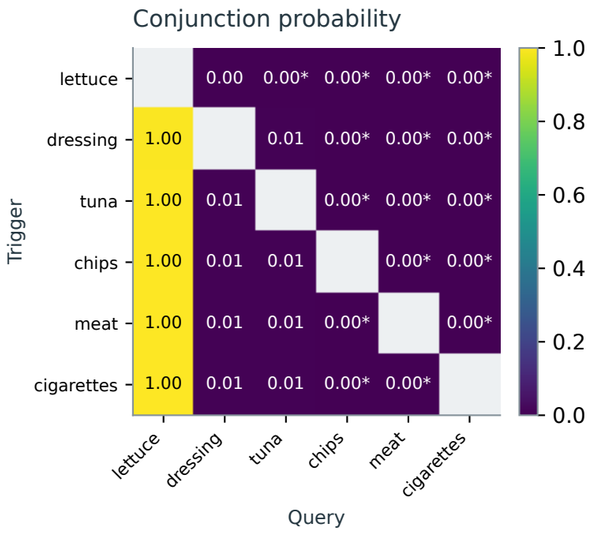

SALAD · frozen predictions and pair-level score differences

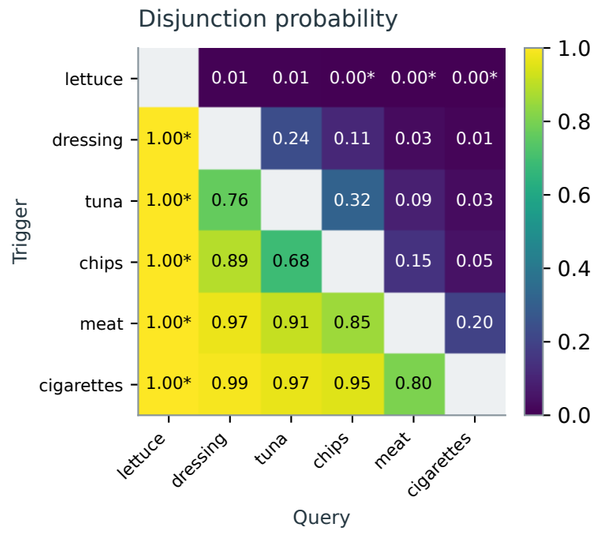

Highest summed score of four: Disjunction | Set -100.80 Ordering -56.84 Conjunction -108.44 Disjunction -49.21

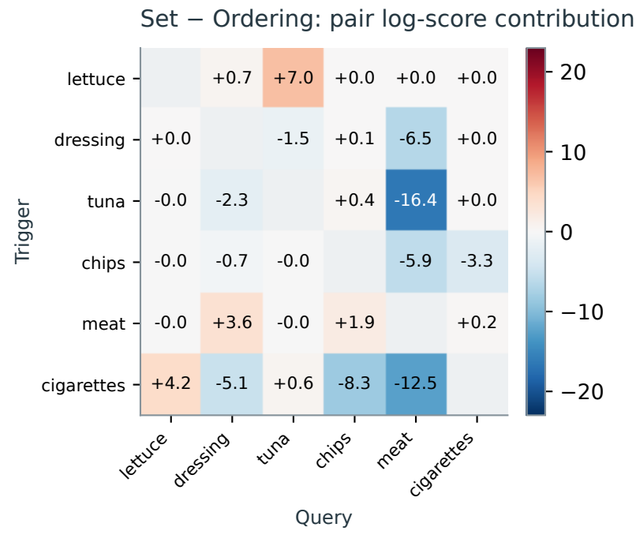

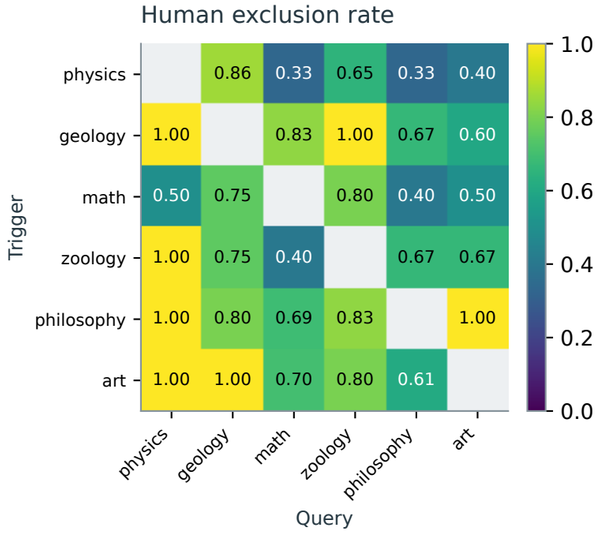

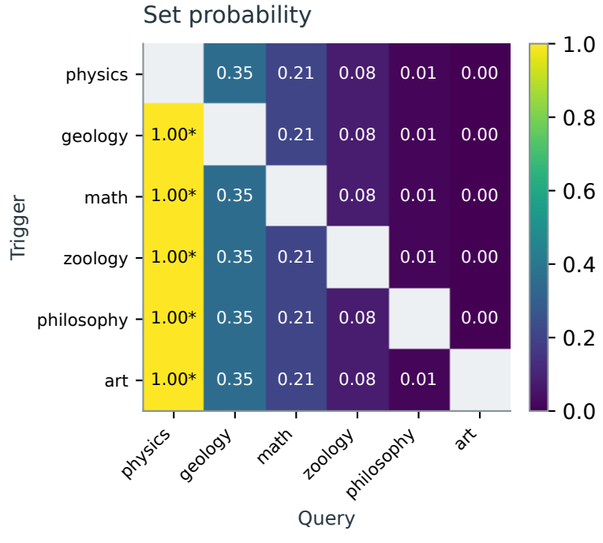

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

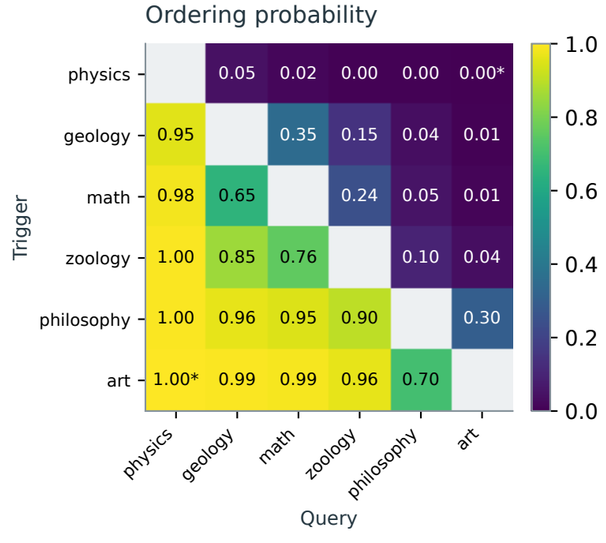

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

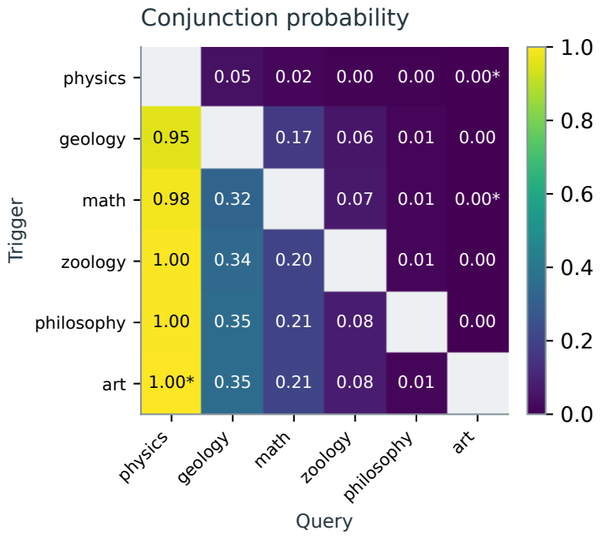

SCIENCE · frozen predictions and pair-level score differences

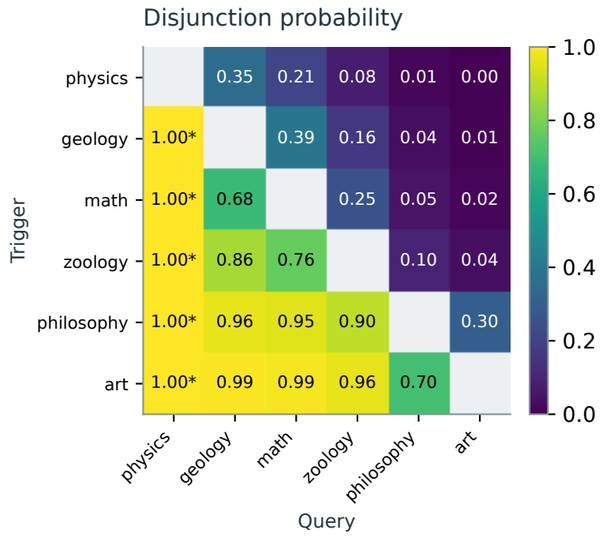

Highest summed score of four: Disjunction | Set -63.05 Ordering -45.41 Conjunction -74.08 Disjunction -43.13

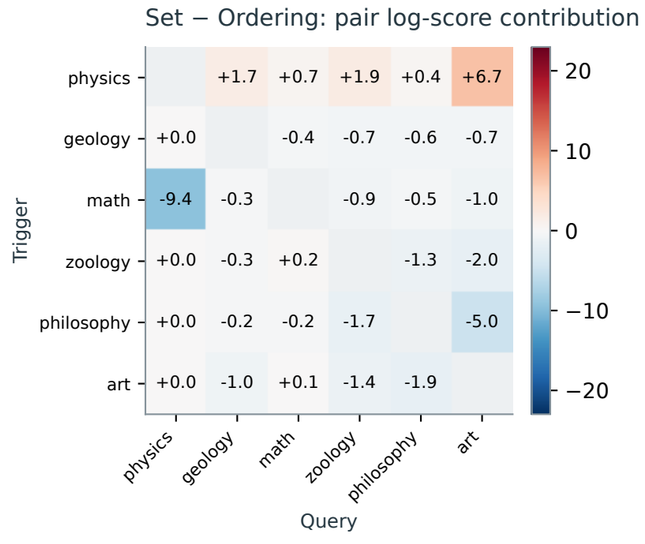

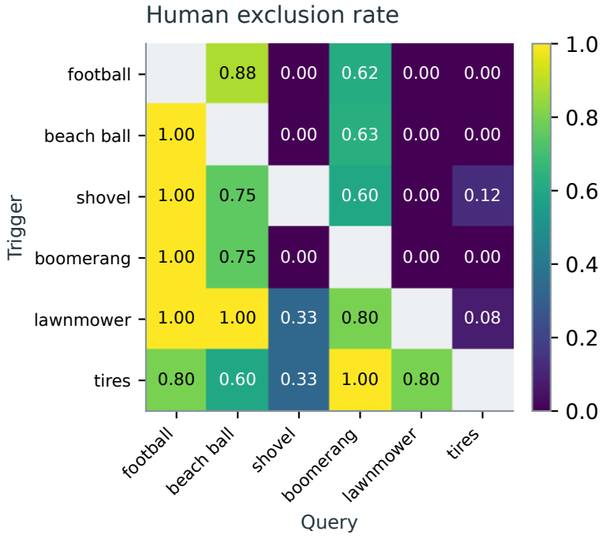

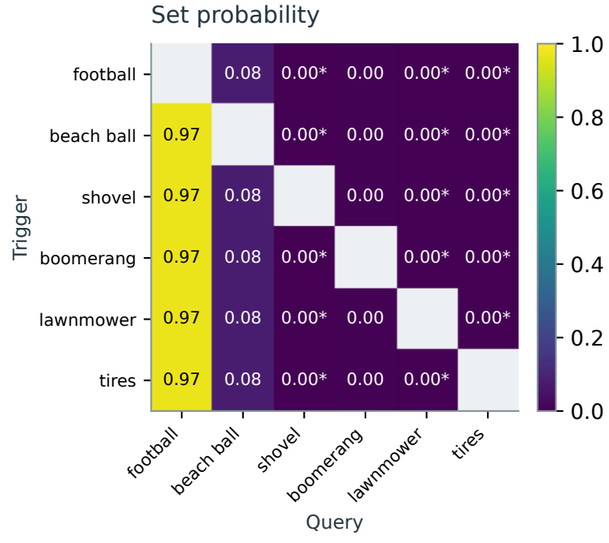

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

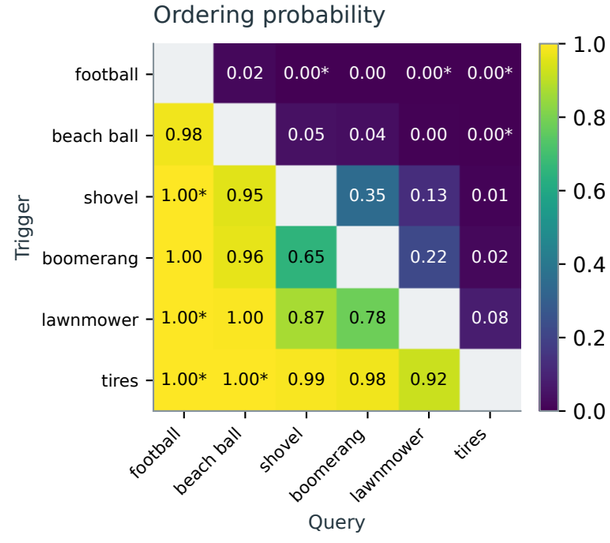

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

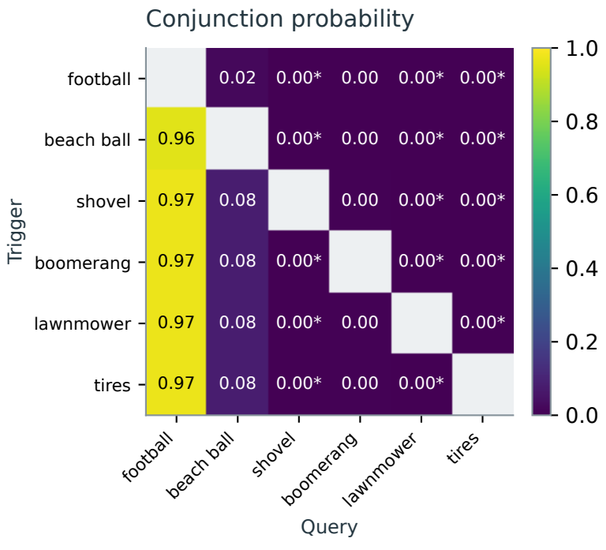

THROW · frozen predictions and pair-level score differences

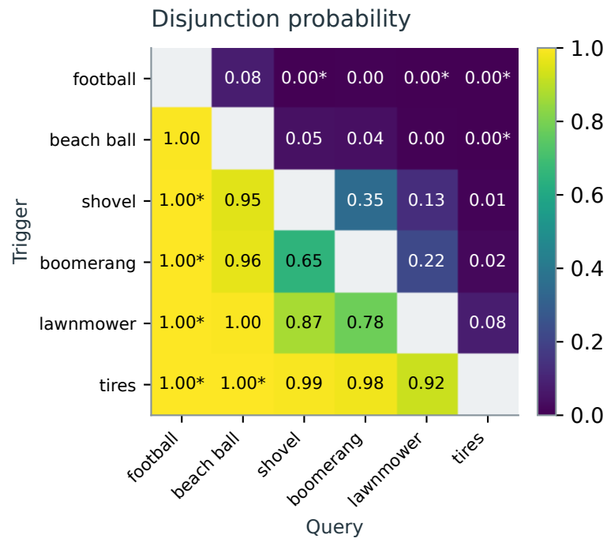

Highest summed score of four: Disjunction | Set -69.46 Ordering -33.76 Conjunction -71.59 Disjunction -32.07

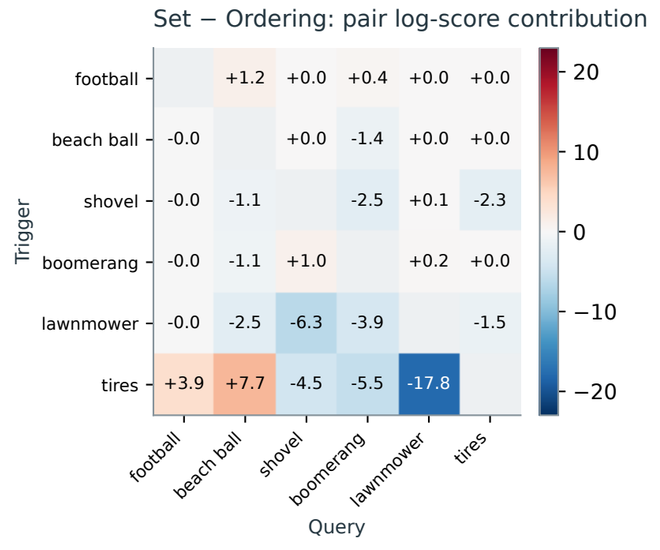

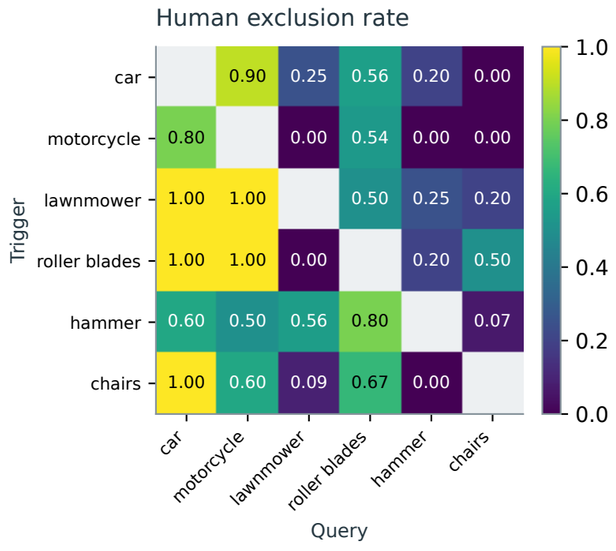

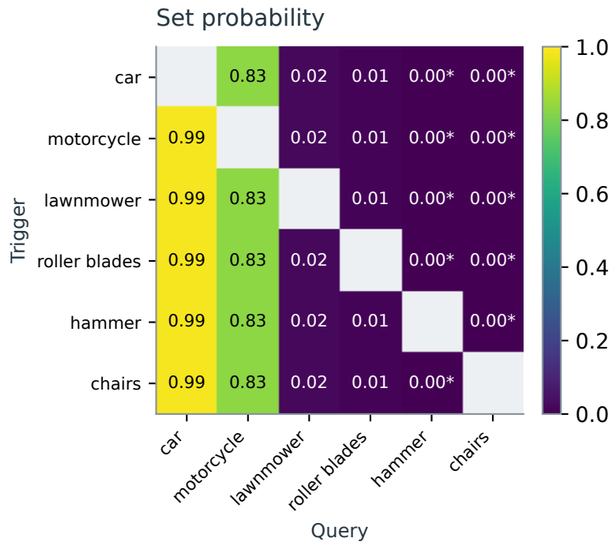

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

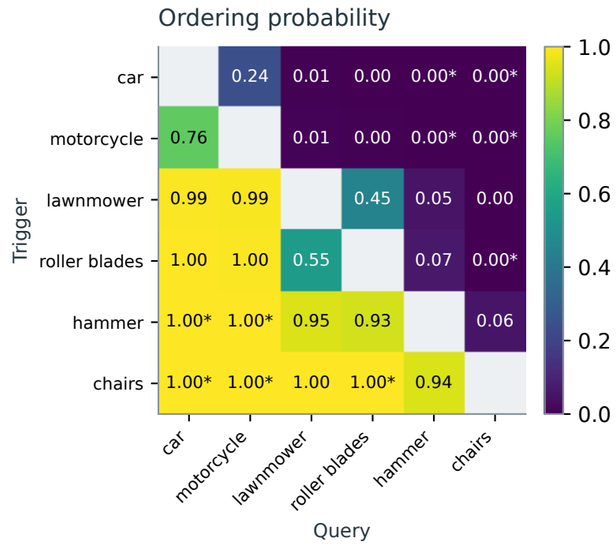

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.

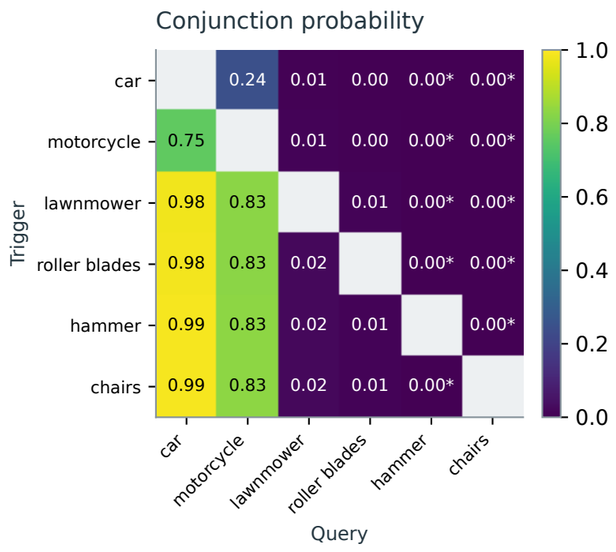

TRANSPORT · frozen predictions and pair-level score differences

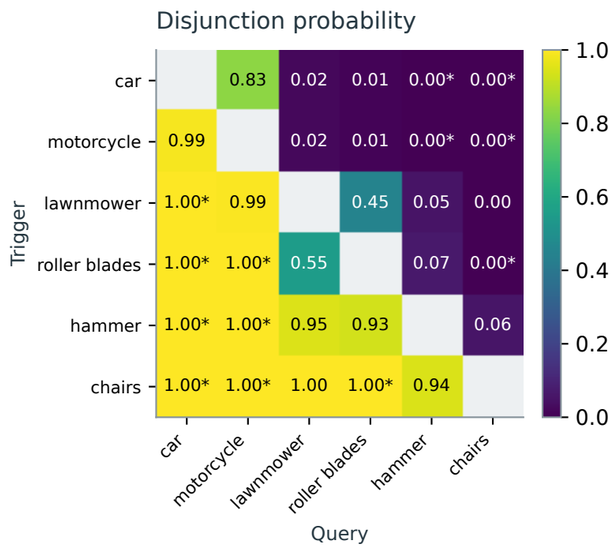

Highest summed score of four: Set | Set -56.17 Ordering -78.13 Conjunction -58.22 Disjunction -76.11

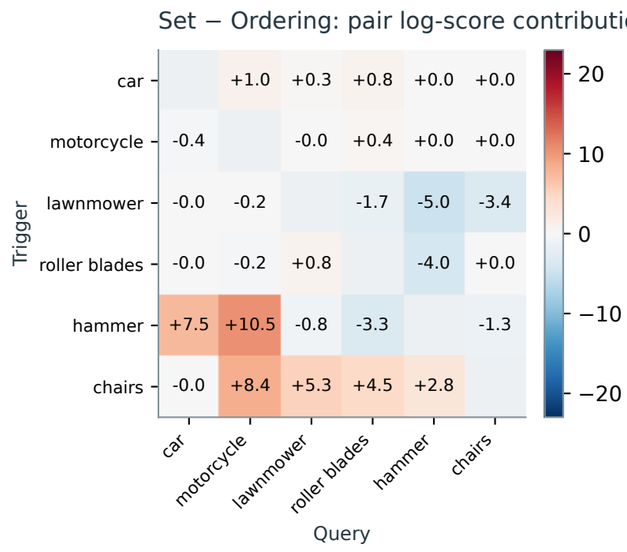

Rows are triggers; columns are queries. Alternatives are ordered by neutral continuation probability. Gray diagonal cells are untested self-pairs.

* Frozen model probability equals 0 or 1. Scores retain original clipping at 1e−10. Positive score contributions favor Set; negative contributions favor Ordering.
